Safety information

Electrical Safety

- Before installing or removing signal cables, ensure that the power cables for the system unit and all attached devices are unplugged.
- To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.
- When adding or removing any additional devices to or from the system, ensure that the
 power cables for the devices are unplugged before the signal cables are connected.
 If possible, disconnect all power cables from the existing system before you add a
 device.
- If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your dealer.

Sécurité électrique

- Avant d'installer ou de retirer des câbles, assurez-vous que les câbles d'alimentation du système et de tous les périphériques sont débranchés.
- Pour éviter tout risque de choc électrique, débranchez le câble d'alimentation de la prise électrique avant de toucher au système.
- Lors de l'ajout ou du retrait de périphériques, vérifiez que les câbles d'alimentation sont débranchés avant de brancher d'autres câbles. Si possible, déconnectez tous les câbles d'alimentation du système avant d'y installer un périphérique.
- Si le bloc d'alimentation est endommagé, n'essayez pas de le réparer vous-même. Contactez un technicien électrique qualifié ou votre revendeur.

Operation Safety

- Any mechanical operation on this server must be conducted by certified or experienced engineers.
- Before operating the server, carefully read all the manuals included with the server package.
- Before using the server, ensure all cables are correctly connected and the power cables are not damaged. If any damage is detected, contact your dealer as soon as possible.
- To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.
- Avoid dust, humidity, and temperature extremes. Place the server on a stable surface.
- If you encounter technical problems with the product, contact a qualified service technician or your retailer.

This product is equipped with a three-wire power cable and plug for the user's safety. Use the power cable with a properly grounded electrical outlet to avoid electrical shock.

Sécurité de fonctionnement

- Toute opération mécanique sur ce serveur doit être effectuée par des ingénieurs certifiés ou expérimentés.
- Avant d'utiliser le serveur, lisez attentivement tous les manuels fournis avec ce dernier.
- Avant d'utiliser le serveur, vérifiez que tous les câbles sont bien branchés et que les câbles d'alimentation ne sont pas endommagés. Si des dommages sont détectés, contactez votre revendeur dès que possible.
- Pour éviter les court-circuits, gardez les clips, les vis et les agrafes loin des connecteurs, des slots, des interfaces de connexion et de la circuiterie.
- Évitez la poussière, l'humidité et les températures extrêmes. Placez le serveur sur une surface stable.
- Si vous rencontrez des problèmes techniques avec votre produit, contactez un technicien qualifié ou votre revendeur.

Ce produit est équipé d'un câble d'alimentation et d'une prise tripolaires pour la sécurité de l'utilisateur. Utilisez le câble d'alimentation sur une prise électrique correctement reliée à la terre pour éviter les chocs électriques.

Restricted Access Location

This product is intended for installation only in a Computer Room where:

- Access can only be gained by SERVICE PERSONS or by USERS who have been instructed about the reasons for the restrictions applied to the location and about any precautions that shall be taken.
- Access is through the use of a TOOL, or other means of security, and is controlled by the authority responsible for the location.

Emplacement d'accès restreint

Ce produit est destiné à être installé uniquement dans une salle informatique où :

- L'accès est uniquement accordé aux TECHNICIENS ou UTILISATEURS qui ont connaissance des raisons de cette restriction et des précautions qui devraient être prises.
- L'accès se fait par le biais d'un OUTIL ou tout dispositif de sécurité, et est contrôlé par l'autorité responsable de cet emplacement.

Lithium-Ion Battery Warning

CAUTION! Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

-Avertissement sur les batteries Lithium-Ion-

ATTENTION ! Danger d'explosion si la batterie n'est pas correctement remplacée. Remplacer uniquement par une batterie de type identique ou équivalent, comme recommandé par le fabricant. Jetez les batteries usagées conformément aux instructions du fabricant.

Heavy System -

CAUTION! This server system is heavy. Ask for assistance when moving or carrying the system.

- Système lourd

ATTENTION ! Ce serveur est un système lourd. Demandez de l'aide pour déplacer ou transporter le système.

Optical Drive Safety Information

Laser Safety Information

To prevent exposure to the optical drive's laser, do not attempt to disassemble or repair the optical drive by yourself. For your safety, contact a professional technician for assistance.

Informations de sécurité concernant le lecteur optique

Informations de sécurité relatives au laser

Risque d'exposition dangereuse au laser. Ne tentez pas de démonter ou réparer le lecteur de disque optique. Pour votre sécurité, faites réparer le lecteur de disque optique uniquement par un prestataire de dépannage agréé.

About this guide

Audience

This user guide is intended for system integrators, and experienced users with at least basic knowledge of configuring a server.

Contents

This guide contains the following parts:

1. Chapter 1: Product Introduction

This chapter describes the general features of the server, including sections on front panel and rear panel specifications.

2. Chapter 2: Hardware Information

This chapter lists the hardware setup procedures that you have to perform when installing or removing system components.

3. Chapter 3: Motherboard Information

This chapter gives information about the motherboard that comes with the server. This chapter includes the motherboard layout, jumper settings, and connector locations.

4. Chapter 4: BIOS Setup

This chapter tells how to change system settings through the BIOS Setup menus and describes the BIOS parameters.

5. Chapter 5: Driver Installation

This chapter provides instructions for installing the necessary drivers for different system components.

Conventions

To ensure that you perform certain tasks properly, take note of the following symbols used throughout this manual.

DANGER/WARNING: Information to prevent injury to yourself when trying to complete a task.

CAUTION: Information to prevent damage to the components when trying to complete a task.

IMPORTANT: Instructions that you MUST follow to complete a task.

NOTE: Tips and additional information to help you complete a task.

Typography

Bold text	Indicates a menu or an item to select.
Italics	Used to emphasize a word or a phrase.
<key></key>	Keys enclosed in the less-than and greater-than sign means that you must press the enclosed key.
	Example: <enter> means that you must press the Enter or Return key.</enter>
<key1>+<key2>+<key3></key3></key2></key1>	If you must press two or more keys simultaneously, the key names are linked with a plus sign (+).
	Example: <ctrl>+<alt>+</alt></ctrl>
Command	Means that you must type the command exactly as shown, then supply the required item or value enclosed in brackets.
	Example: At the DOS prompt, type the command line: format A:/S

References

Refer to the following sources for additional information, and for product and software updates.

1. ASUS Control Center (ACC) user guide

This manual tells how to set up and use the proprietary ASUS server management utility. Visit <u>asuscontrolcenter.asus.com</u> for more information.

2. ASUS websites

The ASUS websites provide updated information for all ASUS hardware and software products. Visit <u>https://www.asus.com</u> for more information.

Product Introduction

1

This chapter describes the general features of the server. It includes sections on front panel and rear panel specifications.

1.1 System package contents

Model Name	RS520A-E12-RS12U		
Chassis	ASUS R2P-E 2U Rackmount Chassis		
Motherboard	ASUS K14PA-U24 Server Board		
	12 x 3.5-inch Storage Device Trays or Dummy Trays		
Component	2 x 2.5-inch Storage Device Trays		
	4 x System Fans		
A	1 x CPU Heatsink		
Accessories	2 x AC Power Cable		
	1+1 Redundant 1200W/1600W 80PLUS Platinum Power Supply or 1+1 Redundant 1600W 80PLUS Titanium Power		
Optional Items	2 x Riser card		
	1 x System redundant fan kit		
	1 x Friction Rail Kit or Ball-bearing rail kit		

Check your system package for the following items.

If any of the above items is damaged or missing, contact your retailer.

1.2 Serial number label

The product's serial number contains 12 characters such as xxSxxxxxxx and printed on the sticker at the server's front cover.

The correct serial number of the product is required if you need to request for support from the ASUS Technical Support team.

1.3 System specifications

The ASUS RS520A-E12 Series features the ASUS K14PA-U24 server board. The server supports AMD EPYC[™] 9004 Series processors plus other latest technologies through the chipsets onboard.

Model Name		RS520A-E12-RS12U	
Motherboard		K14PA-U24	
		1 x Socket SP5 (LGA 6096)	
Processor Su	ıpport	4 th Genenration AMD EPYC [™] processors with AMD 3D V-Cache technology	
		AMD EPYC [™] 9004 series (up to 400W)	
Core Logic		System on Chip (SoC)	
	Total Slots	24 (12-channel per CPU, 24 DIMM per CPU) * May support to 2DPC, depends on AMD schedule	
	Capacity	Maximum up to 6TB	
		DDR5 4800/4400/4000/3600 RDIMM / 3DS RDIMM	
		1 DPC up to 4800	
Memory	Memory Type	2 DPC up to 4000 (1R+1R)	
		2 DPC up to 3600 (1R+2R)/(2R+2R)	
		* Please refer to <u>www.asus.com</u> for latest memory AVL update	
		256GB, 128GB, 64GB, 32GB RDIMM	
	Memory Size	256GB, 128GB, 64GB, 32GB 3DS RDIMM	
		* Refer to <u>www.asus.com/support</u> for more information	
	PIKE Slots	5+1	
	Slot Type	Up to 5 PCIe Gen5 slots + 1 OCP3.0	
		2 x PCIe Gen5 x16, FHFL or 4 x PCIe Gen5 x8	
Expansion		1 x PCle Gen5 x16, LP	
Slots		1 x OCP 3.0 (PCle Gen5 x16)	
	M.2	2 x M.2 (SATA signal or PCIe Gen5 x4 link) (Up to 22110)	
	microSD Card slot	1	
	Proprietary Slot 1	1 x PCIe x16 slot (Gen5 x8 link, for pike card only)	
	Proprietary Slot 2	-	
		CPU integrated	
	SATA Controller	2 x M.2 connectors (support SATA3 6Gb/s or PCIe Gen5 x4 link)	
Storage		1 x SATA controller (supports 2 x SATA3 6Gb/s)	
Storage		Optional kits:	
	SAS Controller	ASUS PIKE II 3008 8-port SAS 12Gb/s HBA card	
		Broadcom MegaRAID 9560-16i	

Model Name		RS520A-E12-RS12U	
Storage Bays	Storage Bay	Front bays 12 x 3.5" hot-swap drive bays - 12 x NVMe/SATA/SAS <u>Rear bays</u> 2 x 2.5-inch Storage Device Trays (SATA III)	
Storago	Backplane Connectors	6 x MCIO x2 (for NVMe) 3 x SlimSAS x4 (for SATA)	
Bays	MB Onboard Connectors	2 x M.2 connectors 8 x MCIO connectors	
Networking		1 x Dual Port Intel I350-AM2 Gigabit LAN controller 1 x Management Port <u>Optional OCP Adapter:</u> Up to 100Gb/s Ethernet / InfiniBand Adapter	
VGA		BMC Integrated (Aspeed AST2600 256MB)	
Graphic		4 x single-wide GPU (FHFL) or 2 x double-wide GPU (FHFL)	
Front I/O Ports		2 x USB 3.2 Gen 1 ports 1 x Power button	
Rear I/O Ports		2 x USB 3.2 Gen 1 ports 1 x VGA port 1 x RJ-45 Mgmt LAN port 2 x RJ-45 1GbE LAN ports	
Switch/LED		Front Switch/LED: 1 x Power Switch (w/LED) 1 x Reset Switch 1 x Location Switch (w/LED) 1 x HDD Access LED 1 x Message LED LAN 1-2 LED Rear Switch/LED: 1 x Port80 LED (Q-Code) 1 x Power Switch w/LED 1 x Location Switch w/LED 1 x Message LED	
Security Optio	ons	TPM-SPI Module (optional) PFR Module (optional)	
OS Support		Please find the latest OS support from https://www.asus.com/	

Model Name		RS520A-E12-RS12U	
	Software	ASUS Control Center (Classic)	
Management Solution	Out of Band Remote Management	On-Board ASMB11-iKVM for KVM-over-IP	
Regulatory Com	oliance	CE, RCM, FCC (Class A)	
Dimension		840mm x 449mm x 88.1mm (2U) 33.07in x 17.68in x 3.47in	
Net Weight Kg		17.95Kg (CPU, DRAM & HDD not included)	
Gross Weight Kg		25.14Kg (CPU, DRAM & HDD not included, Packing include)	
Power Supply (different configuration by region) Environment		1+1 Redundant 1200W 80 PLUS Platinum Power Supply Rating: 100-127/200-240Vac, 10A/8A (x2), 50/60Hz	
		1+1 Redundant 1600W 80 PLUS Platinum/Titanium Power Supply Rating: 100-127/200-240Vac, 12A/9.5A (x2), 50/60Hz	
		(240Vdc Only for China)	
		Operation temperature: 10°C ~ 35°C	
		Non operation temperature: -40°C ~ 60°C	
		Non operation humidity: 20% ~ 90% (Non condensing)	

*Specifications are subject to change without notice.

1.4 Front panel features

The barebone server displays a simple yet stylish front panel with easily accessible features. The power and reset buttons, LED indicators are located on the front panel.

For extra security, a front bezel (purchased separately) can be installed to prevent unauthorized physical access to the hard drives and power button.

1.5 Rear panel features

The rear panel includes the expansion slots, and system power sockets. The middle part includes the I/O shield with openings for the rear panel connectors on the motherboard.

- The Q-Code LED provides the most probable cause of an error code as a starting
 - point for troubleshooting. The actual cause may vary from case to case.
- Refer to the Q-Code table for details.

1.6 Internal features

The barebone server includes the basic components as shown.

- 1. Redundant Power supply (hidden)
- 2. 2 x 2.5" storage device trays
- 3. ASUS K14PA-U24 Server Board
- 4. SATA/SAS/NVMe back panel
- 5. Front USB panel
- 6. System fans
- 7. Asset Tag (hidden)
- 8. 12 x 3.5" storage device trays
- 9. PCle riser cards
- 10. Front I/O panel

A protection film is pre-attached to the front cover before shipping. Please remove the protection film before turning on the system for proper heat dissipation.

HAZARDOUS MOVING PARTS KEEP FINGERS AND OTHER BODY PARTS AWAY

1.7 LED information

1.7.1 Front panel LEDs

LED	lcon	Display status	Description
Power LED	ወ	ON	System power ON
Storage device	8	OFF	No activity
access LED	9	Blinking	Read/write data into the storage device
Message LED		OFF	System is normal; no incoming event
		ON	With the onboard ASMB10-iKVM: a hardware monitor event is indicated
	品	OFF	No LAN connection
LAN LEDs		Blinking	LAN is transmitting or receiving data
		ON	LAN connection is present
Location LED	ID	ON	Location switch is pressed
		OFF	Normal status (Press the location switch again to turn off)

1.7.2 Storage device status LED

Storage Device LED Description						
Status (RED)	ON	Storage device has failed				
	Blinking	RAID rebuilding or locating				
Activity (GREEN)	ON	Storage device power ON				
	Blinking	Read/write data from/into the SATA/SAS storage device				
	OFF	Storage device not found				

1.7.3 LAN (RJ-45) LEDs

Intel® I350-AM2 1G LAN port LEDs

ACT/L	INK LED	SPEED LED		
Status	Description	Status	Description	
OFF	No link	OFF	10 Mbps connection	
GREEN	Linked	ORANGE	100 Mbps connection	
BLINKING	Data activity	GREEN	1 Gbps connection	

Dedicated Management LAN port (DM_LAN1) LED indications

ACT/LI	NK LED	SPEED LED			
Status	Description	Status	Description		
OFF	No link	OFF	10 Mbps connection		
GREEN	Linked	ORANGE	100 Mbps connection		
BLINKING	Data activity	GREEN	1 Gbps connection		

1.7.4 Rear panel LEDs

LED	lcon	Display status	Description
Power LED		ON	System power ON
Location LED	Ċ	ON	Location switch is pressed
		OFF	Normal status (Press the location switch again to turn off)

Hardware Information

This chapter lists the hardware setup procedures that you have to perform when installing or removing system components.

2.1 Chassis cover

2.1.1 Removing the rear cover

1. Remove the two (2) screws on both sides of the rear cover with a Phillips screwdriver.

- 2. Push the buttons on both sides of the top cover to release the rear cover from the chassis.
- 3. Slide the rear cover towards the rear panel to disengage it from the chassis, then lift the rear cover from the chassis.

2.1.2 Removing the mid cover

1. Remove the two (2) screws on both sides of the mid cover with a Phillips screwdriver.

- 2. Push the buttons on both sides to release the mid cover from the chassis.
- 3. Lift the mid cover from the chassis.

2.2 Air duct

2.2.1 Removing the air ducts

1. Loosen the screws of the left and right riser brackets (A), then lift and remove both riser brackets (B).

2. Lift and remove the CPU and DIMM air duct.

3. Lift and remove the PSU air duct.

2.2.2 Installing the air ducts

1. Replace the PSU air duct.

2. Replace the CPU and DIMM air duct.

- 3. Replace the left and right riser brackets, making sure both riser brackets are seated firmly in the chassis.
- 4. Secure both left and right riser brackets using the respective thumbscrews.

2.3 Central Processing Unit (CPU)

The motherboard comes with a surface mount Socket SP5 designed for the AMD EPYC[™] 7004 Series.

- Upon purchase of the motherboard, ensure that the PnP cap is on the socket and the socket contacts are not bent. Contact your retailer immediately if the PnP cap is missing, or if you see any damage to the PnP cap/socket contacts/motherboard components. ASUS will shoulder the cost of repair only if the damage is shipment/ transit-related.
 - Keep the cap after installing the motherboard. ASUS will process Return Merchandise Authorization (RMA) requests only if the motherboard comes with the cap on the Socket.
 - The product warranty does not cover damage to the socket contacts resulting from incorrect CPU installation/removal, or misplacement/loss/incorrect removal of the PnP cap.

2.3.1 Installing the CPU and heatsink

To install the CPU and heatsink:

- 1. Remove the rear cover. For more information, refer to Chassis cover.
- 2. Remove the air ducts. For more information, refer to Air ducts.
- 3. Locate the CPU socket on your motherboard..

K14PA-U24 CPU Socket SP5 LGA 6096

4. Loosen the screw on the socket to open the load plate.

The load plate screws are T20 models. A torque value of 13.5 ± 1.0 kg-cm (11.7±0.9 lbf-in) is recommended.

5. Lift open the rail frame.

6. Slide the external cap out of the rail frame.

7. Slide the carrier frame with CPU into the rail frame, then remove the PnP cap.

The carrier frame with CPU fits in only one correct orientation. DO NOT force the carrier frame with CPU into the rail frame.

8. Gently close the rail frame just enough to let it sit on top of the CPU socket.

Carrier frame with CPU

 Close the load plate just enough to let it sit on top of the CPU, then secure the load plate using the screw on the socket.

The load plate screws are T20 models. A torque value of 13.5 ± 1.0 kg-cm (11.7±0.9 lbf-in) is recommended.

Ĝ

10. Place the heatsink on the CPU socket and make sure the heatsink screws are aligned with the CPU socket.

11. Partially tighten each of the six screws with a screwdriver in the order shown both in the illustration and on the heatsink just enough to attach the heatsink to the motherboard. When the six screws are attached, tighten them one by one in the same order to completely secure the heatsink.

The heatsink screws are T20 models. A torque value of 13.5 \pm 1.0kg-cm (11.7 \pm 0.9 lbf-in) is recommended.

12. Reinstall the air ducts. For more information, refer to Air ducts.

2.4 System memory

The motherboard comes with 24 Double Data Rate 5 (DDR5) Dual Inline Memory Modules (DIMM) sockets.

The figure illustrates the location of the DDR5 DIMM sockets:

2.4.1 Memory Configurations

You may install 32GB, 64GB, 128GB, or 256GB RDIMM, and 32GB, 64GB, 128GB, or 256GB 3DS RDIMM into the DIMM sockets. If you are not sure on which slots to install the DIMMS, you can use the recommended memory configuration in this section for reference.

22 DIMMs	~	~	~	\checkmark	~	~	~	\checkmark	~	~		~	~	~	~	\checkmark	~	~	~	~	~	~		1
24 DIMMs	\checkmark	\checkmark	~	\checkmark	\checkmark	\checkmark	~	\checkmark	\checkmark	\checkmark	~	\checkmark	\checkmark	~	~	\checkmark	\checkmark	\checkmark	~	\checkmark	\checkmark	~	\checkmark	✓

- When mixing 2DPC and 1DPC, ensure that each channel's total DIMM size should be equal. The DIMM size of 2DPC should equal to that of 1DPC, for example, if 2DPC is using a 32GB memory module (32GB * 2), then a 64GB memory module should be installed for 1DPC.
- All memory modules for 2DPC should be the same.
- Always install DIMMs with the same CAS latency. For optimum compatibility, it is
 recommended that you obtain memory modules from the same vendor.

2.4.2 Installing a DIMM

Ensure to unplug the power supply before adding or removing DIMMs or other system components. Failure to do so may cause severe damage to both the motherboard and the components.

- 1. Unlock a DIMM socket by pressing the retaining clips outward.
- Align a DIMM on the socket such that the notch on the DIMM matches the DIMM slot key on the socket.

A DIMM is keyed with a notch so that it fits in only one direction. DO NOT force a DIMM into a socket in the wrong direction to avoid damaging the DIMM.

 Hold the DIMM by both of its ends then insert the DIMM vertically into the socket. Apply force to both ends of the DIMM simultaneously until the retaining clips snaps back into place.

Ensure that the DIMM is sitting firmly on the DIMM slot.

Always insert the DIMM into the socket VERTICALLY to prevent DIMM notch damage.

2.4.3 Removing a DIMM

- 1. Remove the chassis cover. For more information, see the section Chassis cover.
- 2. Simultaneously press the retaining clips outward to unlock the DIMM.
- 3. Remove the DIMM from the socket.

Support the DIMM lightly with your fingers when pressing the retaining clips. The DIMM might get damaged when it flips out with extra force.

2.5 (optional) Front bezel

For extra security, a front bezel (purchased separately) can be installed to prevent unauthorized physical access to the hard drives and power button.

If the system will be installed in a cabinet, make sure that you reserver a gap of at least 45 mm between the rack post and the cabinet door.

2.5.1 Removing the front bezel

1. Push the bezel release latch of the front bezel towards the right to unlock the bezel.

2. Slide the front bezel towards the left of the system to detach the front bezel, then remove it from the system.

2.5.2 Installing the front bezel

1. Align the two (2) right notches on the front bezel to the notch holes on the right front panel.

2. Attach the right side of the front bezel to the right front panel.

3. Push the left side of the front bezel towards the left USB panel.

 Make sure the two (2) left notches on the front bezel are aligned with the notch holes on the left USB panel, then push and attach the front bezel to the left USB panel.

Make sure the bezel release latch is in the unlock state (pushed to the right) before attaching the front bezel to the left USB panel.

5. Push the bezel release latch of the front bezel towards the left to lock the bezel.

2.6 Storage devices

The system supports twelve (12) 3.5" hot-swap SATA/SAS/NVMe storage devices (up to 12 x NVMe/SATA/SAS). The storage device installed on the storage device tray connects to the motherboard SATA/SAS/NVMe ports via the SATA/SAS/NVMe backplane.

2.6.1 Installing a 3.5" storage device to the front bay

To install a 3.5" hot-swap SATA/SAS storage device to the front bays:

1. Press the spring lock to release the tray lever and to partially eject the tray from the bay.

2. Firmly hold the tray lever and pull the storage device tray out of the bay.

- 3. Place the storage device tray on a flat and stable surface.
- 4. Prepare the 3.5" storage device and the bundled set of screws.
- 5. Place the 3.5" storage device into the tray then secure it with four screws.

- 6. Carefully insert the tray and push it all the way to the depth of the bay (A). Lock the secure tab to secure the drive tray in place (B).
- 7. Repeat steps 1 to 6 to install the other 3.5" storage devices.

2.6.2 Installing a 2.5" storage device to the front bay

To install a 2.5" hot-swap NVMe/SATA/SAS storage device to the front bays:

1. Press the spring lock to release the tray lever and to partially eject the tray from the bay.

2. Firmly hold the tray lever and pull the storage device tray out of the bay.

- 3. Place the storage device tray on a flat and stable surface.
- 4. Prepare the 2.5" storage device and the bundled set of screws.
- 5. Place the 2.5" storage device into the tray then secure it with four screws.

- 6. Carefully insert the tray and push it all the way to the depth of the bay (A). Lock the secure tab to secure the drive tray in place (B).
- 7. Repeat steps 1 to 6 to install the other 2.5" storage devices.

2.6.3 Installing a 2.5" storage device to the rear bay

- Press the spring lock then pull the tray lever outward to release the storage device tray. The storage device tray ejects slightly after you pull out the lever.
- 2. Firmly hold the tray lever and pull the storage device tray out of the bay.
- Place the 2.5" storage device into the storage device tray and make sure it is seated firmly in the storage device tray.

4. Push the storage device tray and storage device assembly all the way into the depth of the rear storage bay until the tray lever and spring lock clicks and secures the storage device tray in place.

When installed, the SATA/SAS/NVMe connector on the storage device connects to the SATA/SAS/NVMe interface on the backplane.

- The storage device tray is correctly placed when its front edge aligns with the bay edge.
- 5. Repeat steps 1 to 4 to install the other SATA/SAS/NVMe storage devices.

2.7 Expansion slot

The barebone server comes with a maximum of five (5) PCIE slots. These slots are preinstalled with two (2) riser card brackets for installing PCIE expansion cards. You need to remove these expansion card brackets if you want to install PCIE expansion cards.

Riser card bracket 1

	Operation mode							
PCIe siot	Mode 1	Mode 2						
Slot 1	x16	x8						
Slot 2	-	x8						
Slot 3 (Internal)	x8	x8						

Riser card bracket 2

	Operation mode							
PCIe siot	Mode 1	Mode 2						
Slot 5	x16	x8						
Slot 4	-	x8						

2.7.1 Installing an expansion card to the left PCIe riser card bracket

The pre-installed left PCIe riser card bracket on the GENZPCIE1 slot has two PCIe x16 slots. The two PCIe x16 slots provides x16 Gen4 links.

To install PCIe x16 (Gen4 x16 link) proprietary cards, such as a graphics card to the left PCIe riser card bracket:

 Loosen the thumbscrew (A) securing the left PCIe riser card bracket to the chassis, then lift the left PCIe riser card bracket upwards (B) out of the chassis to detach it from the PCIe x16 slot on the motherboard.

- 2. Prepare your expansion card and flip the left PCIe riser card bracket over.
- 3. Flip the metal bracket lock open (A) then slide the two metal brackets out of the left PCIe riser card bracket (B) and remove them.

4. Install your expansion card to the PCIe x16 slot on the left PCIe riser card bracket (A), then secure your expansion card to the PCIe riser card bracket using the bundled screws (B). The illustration below is an example of a graphics card.

The amount of screws required may vary between expansion cards, only secure a bundled screw if a screw hole on the expansion card is aligned with the screw hole on the PCIe riser card.

5. Once your expansion card is installed, flip the metal bracket lock back to secure the expansion card to the left PCIe riser card bracket.

 Align the left PCIe riser card bracket to the notch holes on the chassis and the GENZPCIE1 slot on the motherboard. Please refer to the illustration below for the locations of the notch holes on the chassis.

Ensure that no cables are below or in the way of the PCIe riser card bracket when installing it to the chassis.

7. Push the left PCIe riser card bracket down until it is seated firmly in the chasiss.

Ensure that no cables are below or in the way of the PCIe riser card bracket when installing it to the chassis.

8. Secure the left PCIe riser card bracket with the thumbscrew.

2.7.2 Installing an expansion card to the right PCIe riser card bracket

The pre-installed right PCIe riser card bracket on the GENZPCIE2 slot has three PCIe x16 slots, two PCIe x16 slots and one PCIe x8 slot. The two PCIe x16 slots provides x16 Gen4 links. The PCIe x8 slot is reserved only for a PIKE II card.

To install PCIe x16 (Gen4 x16 link) proprietary cards, such as a graphics card to the right PCIe riser card bracket:

1. Lift and remove the PSU air duct.

 Loosen the two (2) thumbscrews (A) securing the right PCIe riser card bracket to the chassis, then lift the right PCIe riser card bracket upwards (B) out of the chassis to detach it from the PCIe x16 slot on the motherboard.

- 3. Prepare your expansion card and flip the right PCIe riser card bracket over.
- 4. Flip the metal bracket lock open (A) then slide the two metal brackets out of the right PCIe riser card bracket (B) and remove them.

 Install your expansion card to the PCIe x16 slot on the right PCIe riser card bracket (A), then secure your expansion card to the PCIe riser card bracket using the bundled screws (B). The illustration below is an example of a graphics card.

The amount of screws required may vary between expansion cards, only secure a bundled screw if a screw hole on the expansion card is aligned with the screw hole on the PCIe riser card.

6. Once your expansion card is installed, flip the metal bracket lock back to secure the expansion card to the right PCIe riser card bracket.

7. Align the right PCIe riser card bracket to the notch hole on the rear of the chassis and the **GENZPCIE2** slot on the motherboard. Please refer to the illustration below for the location of the notch hole on the rear of the chassis.

Ensure that no cables are below or in the way of the PCIe riser card bracket when installing it to the chassis.

8. Push the right PCIe riser card bracket down until it is seated firmly in the chasiss.

Ensure that no cables are below or in the way of the PCIe riser card bracket when installing it to the chassis.

9. Secure the right PCIe riser card bracket with the two (2) thumbscrews.

10. Replace the PSU airduct.

2.7.3 Installing an HBA/RAID card to the right PCIe riser card bracket

To install an HBA/RAID card to the right PCIe riser card:

- 1. Follow step 1 of the **Installing an expansion card to the right PCIe riser card bracket** section to remove the right PCIe riser card bracket.
- 2. Prepare your HBA/RAID card and flip the right PCIe riser card bracket over.
- 3. Slightly pull the lock latch outwards (A), then rotate the lock latch clockwise (B) and remove the metal bracket (C).

4. Insert the HBA/RAID card into the PCIe x8 slot on the right PCIe riser card (A), then rotate the lock latch counter-clockwise (B) until the lock latch secures the HBA/RAID card in place.

- 5. Connect the MiniSAS to Slimline SAS to the HBA/RAID card.
- 6. Follow steps 6 to 7 of the **Installing an expansion card to the right PCIe riser card bracket** section to reinstall the right PCIe riser card bracket to the system.

2.7.4 Installing an OCP 3.0 card to the OCP 3.0 slot

To install the OCP 3.0 card to the server system:

1. Remove the screw securing the metal bracket of the OCP 3.0 slot (A), then remove the metal bracket (B).

2. Insert and push the OCP 3.0 card all the way into the OCP 3.0 slot (A), then secure the OCP 3.0 card using the thumbscrew (B).

2.7.5 Installing an M.2 (NGFF) card

You may install an M.2 card (supports up to 22110) to the onboard M.2 (NGFF) slot on the motherboard.

Both NGFF1 and NGFF2 slots support x4 PCIe link. If one of NGFF1 or NGFF2 slots are occupied, both slots will support SATA link.

- 1. Follow step 1 of the **Installing an expansion card to the left PCIe riser card bracket** section to remove the left PCIe riser card bracket.
- 2. Locate the M.2 connector (NGFF1 or NGFF2) on the motherboard.

K14PA-U24 NGFF connectors

- 3. Select an appropriate screw hole on the motherboard for your M.2 card, then secure the bundled stand to the motherboard.
- 4. Insert the M.2 into the M.2 (NGFF) slot, then secure it using the bundled screw.

5. Follow steps 6 to 8 in **Installing an expansion card to the left PCIe riser card bracke** section to replace the left PCIe riser card bracket.

2.7.6 (optional) Installing the PFR module

The optional PFR module will come pre-installed on your system and is connected to the PFR module connector on your motherboard.

- Į
- The illustration below is for reference only.
- For more information or assistance, please refer to www.asus.com.
- 1. Locate the PFR module connector on your motherboard.

K14PA-U24 ROT_CON1 connector

2. Align and connect the PFR module to the PFR module connector.

3. Push the PFR module down so that it is seated securely on the PFR module connector, then secure it using a screw.

2.7.7 Configuring an expansion card

After installing the expansion card, configure it by adjusting the software settings.

- 1. Turn on the system and change the necessary BIOS settings, if any. Refer to the **BIOS Setup** chapter for more information on BIOS setup.
- 2. Assign an IRQ to the card. Refer to the following tables.
- 3. Install the software drivers for the expansion card.

IRQ	Priority	Standard function
0	1	System Timer
1	2	Keyboard Controller
2	-	Programmable Interrupt
3*	11	Communications Port (COM2)
4*	12	Communications Port (COM1)
5*	13	
6	14	Floppy Disk Controller
7*	15	
8	3	System CMOS/Real Time Clock
9*	4	ACPI Mode when used
10*	5	IRQ Holder for PCI Steering
11*	6	IRQ Holder for PCI Steering
12*	7	PS/2 Compatible Mouse Port
13	8	Numeric Data Processor
14*	9	Primary IDE Channel
15*	10	Secondary IDE Channel

Standard Interrupt assignments

* These IRQs are usually available for ISA or PCI devices.

2.8 Cable connections

- The bundled system cables are pre-connected before shipment. You do not need to disconnect these cables unless you are going to remove pre-installed components to install additional devices.
- Refer to the Motherboard Information chapter for detailed information on the connectors.

Pre-connected system cables

- 1. 24-pin EATXPWR1 power connector (connected to power board)
- 2. 8-pin EATX12V1 power connector (connected to power board)
- 3. 4-pin EATX12V2 power connector (connected to power board)
- 4. Panel connector (connected to front I/O board)
- 5. FRNT_FAN1, FRNT_FAN3, FRNT_FAN5, FRNT_FAN7 System fan connectors (from motherboard to system fans)
- 6. FRNT_FAN2, FRNT_FAN4, FRNT_FAN6, FRNT_FAN8 System fan connectors (optional, from motherboard to system fans)
- MCIO1, MCIO2, MCIO3, MCIO4, MCIO5, MCIO6, MCIO7, and MCIO8 MCIO PCIe connectors (connected to front backplane)

2.9 Backplane cabling

2.10 Storage device configuration and cabling

This section illustrates some storage configurations that is recommended with your server system. Before you start installing or removing the storage device cables, ensure that you have installed the correct storage devices into the supported bays.

Ø

Bay 1 to bay 12 supports NVMe/SATA/SAS. SAS support requires optional HBA/RAID card.

2.10.1 12 x NVMe/SATA/SAS storage device configuration and cabling

The illustrations in this section are for reference only and may vary between models.

1. Install the storage devices into the supported bays.

2. Connect the GENZPCIE PCIe to MCIO PCIe cables to the motherboard and the backplane.

Backplane connector	Cable	Connect to
MCIO_P1	MCIO to MCIO	MCIO1 on the motherboard
MCIO_P2	MCIO to MCIO	MCIO2 on the motherboard
MCIO_P3	MCIO to MCIO	MCIO3 on the motherboard
MCIO_P4	MCIO to MCIO	MCIO4 on the motherboard
MCIO_P5	MCIO to MCIO	MCIO5 on the motherboard
MCIO_P6	MCIO to MCIO	MCIO6 on the motherboard
SLIMSAS1	MCIO to SLIMSAS	MCIO7 on the motherboard
SLIMSAS2	MCIO to SLIMSAS	MCIO7 on the motherboard
SLIMSAS3	MCIO to SLIMSAS	MCIO8 on the motherboard

2.11 Removable/optional components

The following sections describe the installation or removal instructions for the following removable/optional components:

- 1. System fans
- 2. Redundant power supply module

Ensure that the system is turned off before removing any components.

You may need to remove previously installed component or factory shipped components when installing optional components.

2.11.1 System fans

To remove the system fans:

- 1. Locate the fan you want to replace.
- 2. Press the retaining clips inwards (A) and lift upward (B) to remove the fan.

To reinstall the system fans:

- 1. Prepare the fan with the same model and size.
- 2. Install the fan to the fan cage.

The fan can only be installed in one direction. If the fan cannot be installed, turn it around and try again.
2.11.2 Redundant power supply module

To replace a failed redundant power supply module:

- 1. Lift up the power supply module lever.
- 2. Hold the power supply module lever and press the PSU latch, then pull the power supply module out of the system chassis.

- 3. Prepare the replacement power supply module.
- 4. Insert the replacement power supply module into the chassis then push it inwards until the latch locks into place.

2.12 Rail Kit Options

This server system supports the rail kit options listed below. For more information on rail kit installation, refer to corresponding documentation on the ASUS support site or on the official product site for this server system.

- We strongly recommend that at least two able-bodied persons perform the installation
 of the rail kit.
- We recommend the use of an appropriate lifting tool or device, if necessary.
- Friction rail kit
- 1.5U full extension ball bearing rail kit

Motherboard Information

This chapter includes the motherboard layout and brief descriptions of the jumpers and internal connectors.

3.1 Motherboard layout

Layout contents

Central Processing Unit (CPU)		Page
1.	LGA 6096 sockets (CPU1)	4-5

Dual Inline Memory Module (DIMM)

9.	Power connectors (24-pin EATXPWR; 8-pin EATX12V1; 4-pin EATX12V2)	4-18
10.	VGA connector (16-pin VGA_HDR1)	4-18
11.	microSD Card slot (MSD1)	4-19
12.	Storage Device Activity LED connector (4-pin HDLED1)	4-19
13.	System Panel connector (10-1 pin SYS_PANEL1; 14-1 pin SYS_PANEL2)	4-20
14.	BMC Debug UART connector (3-pin BMC_DEBUGUART1)	4-21
15.	Liquid connector (14-1 pin LIQUID_CONN1)	4-21
16.	Power Supply SMBus connector (5-pin PSUSMB1)	4-22
17.	Platform Firmware Resilience (PFR) module connector (ROT_CON)	4-22
18.	Front BP SMBus Protocol connector (10-1 pin BP_I2C1)	4-23
19.	Internal BP SMBus Protocol connector (18-1 MG9098_CON1)	4-23

3.2 Central Processing Unit (CPU)

The motherboard comes with a surface mount SP5 socket designed for the AMD EPYC[™] 7004 Series Family processors.

3.3 Dual Inline Memory Module (DIMM)

The motherboard comes with 24 Double Data Rate 5 (DDR5) Dual Inline Memory Modules (DIMM) sockets.

3.4 Jumpers

1. Clear RTC RAM (3-pin CLRTC1)

This jumper allows you to clear the Real Time Clock (RTC) RAM in CMOS. You can clear the CMOS memory of date, time, and system setup parameters by erasing the CMOS RTC RAM data. The onboard button cell battery powers the RAM data in CMOS, which include system setup information such as system passwords.

To erase the RTC RAM:

- 1. Turn OFF the computer and unplug the power cord.
- 2. Move the jumper cap from pins 1–2 (default) to pins 2–3. Keep the cap on pins 2–3 for about 5–10 seconds, then move the cap back to pins 1–2.
- 3. Plug the power cord and turn ON the computer.
- Hold down the key during the boot process and enter BIOS setup to reenter data.

Except when clearing the RTC RAM, never remove the cap on CLRTC jumper default position. Removing the cap will cause system boot failure!

If the steps above do not help, remove the onboard battery and move the jumper again to clear the CMOS RTC RAM data. After the CMOS clearance, reinstall the battery.

K14PA-U24 Clear RTC RAM

2. VGA controller setting (3-pin VGA_SW1)

This jumper allows you to enable or disable the onboard VGA controller. Set to pins 1-2 to activate the VGA feature.

3. Baseboard Management Controller setting (3-pin BMC_EN1) This jumper allows you to enable (default) or disable on-board BMC. Ensure to set this BMC jumper to enabled to avoid system fan control and hardware monitor error.

K14PA-U24 BMC setting

4. DMLAN setting (3-pin DM_IP_SEL1)

This jumper allows you to select the DMLAN setting. Set to pins 2-3 to force the DMLAN IP to static mode (IP=10.10.10.10, submask=255.255.255.0).

5. IPMI SW setting (3-pin IPMI_SW1)

This jumper allows you to select which protocol in the GPU sensor to function.

K14PA-U24 IPMI_SW1 setting

6. Smart Ride Through (SmaRT) setting (3-pin SMART_PSU1)

This jumper allows you to enable or disable the Smart Ride Through (SmaRT) function. This feature is enabled by default. Set to pins 2-3 to disable it. When enabled, SmaRT allows uninterrupted operation of the system during an AC loss event.

K14PA-U24 Smart Ride Through setting

7. LAN Controller settings (3-pin LAN_SW1-2)

These jumpers allow you to enable or disable the onboard LAN_SW1 or LAN_SW2. Set to pins 1-2 to activate the Gigabit LAN feature.

K14PA-U24 LAN setting

8. Heatsink Type setting (3-pin HS_TYPE1)

This jumper should be set according to the type of heatsink installed.

9. NCSI Device setting (3-pin NCSI_SEL1) This jumper allows you to select which LAN NCSI to enable.

K14PA-U24 NCSI_SEL1 setting

3.5 Internal LEDs

1. Standby Power LED (SBPWR1)

The motherboard comes with a standby power LED. The green LED lights up to indicate that the system is ON, in sleep mode, or in soft-off mode. This is a reminder that you should shut down the system and unplug the power cable before removing or plugging in any motherboard component. The illustration below shows the location of the onboard LED.

2. Baseboard Management Controller LED (BMCLED1) The BMC LED lights up to indicate that the on-board BMC is functional.

3. Message LED (MESLED1)

This onboard LED lights up to red when there is a BMC event log is generated.

4. Storage Device Activity LED (HDDLED1)

This LED is for the storage devices connected to the onboard SATA, or SATA/SAS add-on card. The read or write activities of any device connected to the onboard SATA, or SATA/SAS add-on card causes the rear panel LED to light up.

5. OCP 3.0 Operation Normal LED (G_LED1)

The OCP 3.0 operation normal LED lights up to indicate that OCP 3.0 is functional.

6. OCP 3.0 Power Fail LED (R_LED1)

The OCP 3.0 power fail LED lights up to indicate that OCP 3.0 has encountered a power fail error.

3.6 Internal connectors

1. MCIOPCIE connectors (MCIO1-8)

Connects the PCIe or SATA signal to the riser card or the backplane.

2. SATA connector (SATA12)

Connects SATA signal to backplane to support SATA drives.

K14PA-U24 SATA connectors

3. USB 3.2 Gen 1 connector (FP_USB3; TYPEA_U3)

This connector allows you to connect a USB 3.2 Gen 1 module for additional USB 3.2 Gen 1 ports on the front panel. The USB 3.2 Gen 1 connector provides data transfer speeds of up to 10 Gb/s. The Type-A connector allows you to directly connect a USB flash drive.

4. Chassis Intrusion (2-pin INTRUSION1)

These leads are for the intrusion detection feature for chassis with intrusion sensor or microswitch. When you remove any chassis component, the sensor triggers and sends a high level signal to these leads to record a chassis intrusion event. The default setting is to short the CHASSIS# and the GND pin by a jumper cap to disable the function.

5. Serial Port connector (10-1 pin COM1)

This connector is for a serial (COM) port. Connect the serial port module cable to this connector, then install the module to a slot opening at the back of the system chassis.

The COM module is purchased separately.

6. System Fan connectors (6-pin FRNT_FAN1-8)

The fan connectors support cooling fans of 0.8A-1.0A (12 W max.) or a total of 6.4 A-8.0 A (96 W max.) at +12V. Connect the fan cables to the fan connectors on the motherboard, making sure that the black wire of each cable matches the ground pin of the connector.

DO NOT forget to connect the fan cables to the fan connectors. Insufficient air flow inside the system may damage the motherboard components. These are not jumpers! DO NOT place jumper caps on the fan connectors!

7. TPM connector (14-1 pin TPM1)

This connector supports a Trusted Platform Module (TPM) system, which can securely store keys, digital certificates, passwords, and data. A TPM system also helps enhance network security, protects digital identities, and ensures platform integrity.

8. M.2 (NGFF) connector (NGFF1-2) These connectors allow you to install M.2 devices.

K14PA-U24 NGFF connectors

This connector supports type 2242 / 2260 / 2280 / 22110 devices on both PCIe and SATA interface.

The M.2 (NGFF) device is purchased separately

9. Power connectors (24-pin EATXPWR; 8-pin EATX12V1; 4-pin EATX12V2)

These connectors are for the power supply plugs that connects to the power board. The power supply plugs are designed to fit these connectors in only one orientation. Find the proper orientation and push down firmly until the connectors completely fit.

DO NOT connect VGA cards to these connectors. Doing so may cause system boot errors and permanent damage to your motherboard or device.

10. VGA connector (16-pin VGA_HDR1)

This connector supports the VGA High Dynamic-Range interface.

K14PA-U24 Internal VGA connector

11. microSD Card slot (MSD1)

Your motherboard supports SD Memory Card v2.00 (SDHC) / v3.00 (SDXC).

Disconnect all power (including redundant PSUs) from the existing system before you add or remove a Memory Card, then reboot the system to access the Memory Card.

Some memory cards may not be compatible with your motherboard. Ensure that you use only compatible memory cards to prevent loss of data, damage to your device, or memory card, or both.

12. Storage Device Activity LED connector (4-pin HDLED1)

This LED connector is for the storage add-on card cable connected to the SATA or SAS add-on card. The read or write activities of any device connected to the SATA or SAS add-on card causes the front panel LED to light up.

13. System Panel connector (10-1 pin SYS_PANEL1; 14-1 pin SYS_PANEL2) This connector supports several chassis-mounted functions.

K14PA-U24 System panel connectors

• System power LED (POWERLED)

This 2-pin connector is for the system power LED. Connect the chassis power LED cable to this connector. The system power LED lights up when you turn on the system power, and blinks when the system is in sleep mode.

Message LED (2-pin MLED)

This 2-pin connector is for the message LED cable that connects to the front message LED. The message LED is controlled by the BMC to indicate an abnormal event occurrence.

Locator LED connector (BMCLOCLED, LOCLED)

This connector allows you to connect the Locator LED. The Location LED helps visually locate and identify the server in error on a server rack.

Power Button/Soft-off Button connector (PWRBTN)

The 3-1 pin connector allows you to connect the system power button. Press the power button to power up the system, or put the system into sleep or soft-off mode (depending on the operating system settings).

- LAN activity LED connector (LAN1_LED, LAN2_LED, LAN3_LED, LAN4_LED)
 This 2-pin connector allows you to connect the Gigabit LAN Activity LED.
- Reset button connector (RESET)
 This connector allows you to connect the chassis-mounted reset button. Press the
 reset button to reboot the system.
- TR1 Sensor connector (TR1 SENSOR)
 This connector allows detection of the environmental temperature of the front panel.
- Locator button connector (BMCLOCBTN#) This connector allows you to connect the Locator button. Press the button to light up the Locator LED.

Storage Device Activity LED connector (HDLED) This connector allows you to connect the Storage Device Activity LED. The Storage Device Activity LED lights up or blinks when data is read from or written to the storage device or storage device add-on card.

14. BMC Debug UART connector (3-pin BMC_DEBUGUART1) This connector is used for reading the BMC UART Debug log.

15. Liquid connector (14-1 pin LIQUID_CONN1)

This connector is used for detecting the pump speed of the water cooling system.

16. Power Supply SMBus connector (5-pin PSUSMB1)

This connector allows you to connect SMBus (System Management Bus) to the PSU (power supply unit) to read PSU information. Devices communicate with an SMBus host and/or other SMBus devices using the SMBus interface.

17. Platform Firmware Resilience (PFR) module connector (ROT_CON) This connector allows you to connect a PFR module to enable platform firmware resilience functions.

18. Front BP SMBus Protocol connector (10-1 pin BP_I2C1) This connector is used for sensor readings.

19. Internal BP SMBus Protocol connector (18-1 MG9098_CON1) This connector is used for sensor readings.

4

BIOS Setup

This chapter tells how to change the system settings through the BIOS Setup menus. Detailed descriptions of the BIOS parameters are also provided.

4.1 Managing and updating your BIOS

The following utilities allow you to manage and update the motherboard Basic Input/Output System (BIOS) setup:

1. ASUS CrashFree BIOS 3

To recover the BIOS using a bootable USB flash disk drive when the BIOS file fails or gets corrupted.

2. ASUS EzFlash

Updates the BIOS using a USB flash disk.

Refer to the corresponding sections for details on these utilities.

4.1.1 ASUS CrashFree BIOS 3 utility

The ASUS CrashFree BIOS 3 is an auto recovery tool that allows you to restore the BIOS file when it fails or gets corrupted during the updating process. You can update a corrupted BIOS file using a USB flash drive that contains the updated BIOS file.

Prepare a USB flash drive containing the updated motherboard BIOS before using this utility.

Recovering the BIOS from a USB flash drive

To recover the BIOS from a USB flash drive:

- 1. Insert the USB flash drive with the original or updated BIOS file to one USB port on the system.
- 2. The utility will automatically recover the BIOS. It resets the system when the BIOS recovery finished.

DO NOT shut down or reset the system while recovering the BIOS! Doing so would cause system boot failure!

The recovered BIOS may not be the latest BIOS version for this motherboard. Visit the ASUS website at www.asus.com to download the latest BIOS file.

4.1.2 ASUS EZ Flash Utility

The ASUS EZ Flash Utility feature allows you to update the BIOS without having to use a DOS-based utility.

Before you start using this utility, download the latest BIOS from the ASUS website at www.asus.com.

To update the BIOS using EZ Flash Utility:

- 1. Insert the USB flash disk that contains the latest BIOS file into the USB port.
- 2. Enter the BIOS setup program. Go to the **Tool** menu then select **Start ASUS EzFlash**. Press <Enter>.

- 3. Press Left arrow key to switch to the Drive field.
- Press the Up/Down arrow keys to find the USB flash disk that contains the latest BIOS, then press <Enter>.
- 5. Press Right arrow key to switch to the Folder Info field.
- Press the Up/Down arrow keys to find the BIOS file, and then press <Enter> to perform the BIOS update process. Reboot the system when the update process is done.

- This function can support devices such as a USB flash disk with FAT 32/16 format and single partition only.
- DO NOT shut down or reset the system while updating the BIOS to prevent system boot failure!

Ensure to load the BIOS default settings to ensure system compatibility and stability. Press <F5> and select **Yes** to load the BIOS default settings.

4.2 BIOS setup program

This motherboard supports a programmable firmware chip that you can update using the provided utility described in section **4.1 Managing and updating your BIOS**.

Use the BIOS Setup program when you are installing a motherboard, reconfiguring your system, or prompted to "Run Setup." This section explains how to configure your system using this utility.

Even if you are not prompted to use the Setup program, you can change the configuration of your computer in the future. For example, you can enable the security password feature or change the power management settings. This requires you to reconfigure your system using the BIOS Setup program so that the computer can recognize these changes and record them in the CMOS RAM of the firmware chip.

The firmware chip on the motherboard stores the Setup utility. When you start up the computer, the system provides you with the opportunity to run this program. Press during the Power-On Self-Test (POST) to enter the Setup utility; otherwise, POST continues with its test routines.

If you wish to enter Setup after POST, restart the system by pressing <Ctrl>+<Alt>+<Delete>, or by pressing the reset button on the system chassis. You can also restart by turning the system off and then back on. Do this last option only if the first two failed.

The Setup program is designed to make it as easy to use as possible. Being a menu-driven program, it lets you scroll through the various sub-menus and make your selections from the available options using the navigation keys.

- The default BIOS settings for this motherboard apply for most conditions to ensure optimum performance. If the system becomes unstable after changing any BIOS settings, load the default settings to ensure system compatibility and stability. Press <F5> and select **Yes** to load the BIOS default settings.
- The BIOS setup screens shown in this section are for reference purposes only, and may not exactly match what you see on your screen.
- Visit the ASUS website (www.asus.com) to download the latest BIOS file for this motherboard.

4.2.1 BIOS menu screen

enu items	Menu	bar Configuration	fields	General help

Navigation keys

4.2.2 Menu bar

The menu bar on top of the screen has the following main items:

Main	For changing the basic system configuration
Performance Tuning	For changing the performance settings
Advanced	For changing the advanced system settings
Chipset	For changing the chipset settings
Security	For changing the security settings
Boot	For changing the system boot configuration
Tool	For configuring options for special functions
Event Logs	For changing the event log settings
Server Mgmt	For changing the Server Mgmt settings
Exit	For selecting the exit options

To select an item on the menu bar, press the right or left arrow key on the keyboard until the desired item is highlighted.

4.2.3 Menu items

The highlighted item on the menu bar displays the specific items for that menu. For example, selecting **Main** shows the Main menu items.

The other items (such as Advanced) on the menu bar have their respective menu items.

4.2.4 Submenu items

A solid triangle before each item on any menu screen means that the item has a submenu. To display the submenu, select the item then press <Enter>.

4.2.5 Navigation keys

At the bottom right corner of a menu screen are the navigation keys for the BIOS setup program. Use the navigation keys to select items in the menu and change the settings.

4.2.6 General help

At the top right corner of the menu screen is a brief description of the selected item.

4.2.7 Configuration fields

These fields show the values for the menu items. If an item is user-configurable, you can change the value of the field opposite the item. You cannot select an item that is not user-configurable.

A configurable field is enclosed in brackets, and is highlighted when selected. To change the value of a field, select it and press <Enter> to display a list of options.

4.2.8 Pop-up window

Select a menu item and press <Enter> to display a pop-up window with the configuration options for that item.

4.2.9 Scroll bar

A scroll bar appears on the right side of a menu screen when there are items that do not fit on the screen. Press the Up / Down arrow keys or <Page Up> / <Page Down> keys to display the other items on the screen.

4.3 Main menu

When you enter the BIOS Setup program, the Main menu screen appears. The Main menu provides you an overview of the basic system information, and allows you to set the system date, time, and language settings.

System Language [English]

Allows you to select the system default language.

System Date [Day xx/xx/xxxx]

Allows you to set the system date.

System Time [xx:xx:xx]

Allows you to set the system time.

4.4 Performance Tuning menu

The Performance Tuning menu items allow you to change performance related settings for different scenarios.

Aptio Setup - AMI					
Main Performance Tuning Advanced	Chipset Security Boot T	ool Event LogsServer Mgmt 💿 🕨			
Optimized Performance Setting	[Default]	Dynamically adjusts the			
Core Optimizer	[Disabled]	frequency of all CPU cores			
Engine Boost	[Disabled]	based on their current			
Overclocking	[Disabled]	utilization, delivering better			
Power Balancer	[Disabled]	performance per watt for			
		improved sustem energy			

Optimized Performance Setting [Default]

Allows you to select performance settings for different scenarios.

[Default]	Default settings

- [By Benchmark] Optimize for different kinds of benchmarks. Select this option, then select a benchmark type from the >> list.
- [By Workload] Optimize for different kinds of workloads. Select this option, then select a workload type from the >> list.

This function will reset some BIOS settings that you have changed back to their default values. Please check your BIOS settings again.

The following item appears only when **Power Balancer** is set to **[Disabled]**, or if Optimized Performance Setting is set to **[Default]** or **[By Benchmark]**.

Core Optimizer [Disabled]

Allows you to keep the processor operating at the turbo highest frequency for the maximum performance.

Configuration options: [Disabled] [Auto] [Manual]

The following item appears only when you set Core Optimizer to [Manual].

CPU Max frequency [XXXX]

The default value for this option will be the maximum supported frequency of the CPU installed and may vary between different CPUs.

The following item appears only when you set **Optimized Performance Setting** to **[Default] or [By Benchmark]**.

Engine Boost [Disabled]

Enable this item to boost the CPU's frequency. Recommended operation at an ambient temperature of 25°C or below for optimized performance. Configuration options: [Disabled] [Normal] [Aggressive]

Operate with an ambient temperature of 25°C or lower for optimized performance.

Overclocking [Disabled]

Enable this item to increase the CPU's clock. Please use an external PCIe storage controller for your hard drives when enabling this feature. Configuration options: [Disabled] [Enabled]

Please note that overclocking might cause component damage or system crashes, which may reduce the lifespan of the system and the CPU. Use this tool at your own risk.

The following item appears only when you set **Core Optimizer** to [**Disabled**], or if Optimized Performance Setting is set to [**Default**] or [**By Benchmark**].

Power Balancer [Disabled]

Allows you to dynamically adjust the frequency of all CPU cores based on their current utilization, delivering better performance per watt for improved system energy efficiency. Configuration options: [Disabled] [Enabled by ACC]

When setting **Power Balancer** to **[Enabled by ACC]**, make sure that you have the latest ASUS Control Center software installed to support Power Balancer. Please see below for recommended software versions: - ACC: 1.4.3.5 version or above.

The following item appears only when you set Power Balancer to [Enabled by ACC].

Policy [Auto]

Configuration options: [Auto] [Manual]

The following item appears only when you set Policy to [Manual].

CPU Max frequency [XXXX]

The default value for this option will be the maximum supported frequency of the CPU installed and may vary between different CPUs.

4.5 Advanced menu

The Advanced menu items allow you to change the settings for the CPU and other system devices.

Take caution when changing the settings of the Advanced menu items. Incorrect field values can cause the system to malfunction.

CPU Common Options

Performance

Allows you to configure performance options.

REP-MOV/STOS Streaming [Enabled]

Allows you to enable or disable the use of non-caching streaming stores for large sizes.

Configuration options: [Disabled] [Enabled]

Prefetcher Settings

Allows you to configure prefetcher options.

Core Watchdog

Allows you to configure core watchdog options.

RedirectForReturnDis [Auto]

Allows you to set RedirectForReturnDis to 0, 1, or Auto as a workaround for GCC/ C000005 issue for XV Core on CZ A0. Configuration options: [Auto] [1] [0]

Platform First Error Handling [Auto]

Allows you to enable or disable PFEH, cloak individual banks, and mask deferred error interrupts from each bank. Configuration options: [Disabled] [Enabled] [Auto]

Core Performance Boost [Auto]

Configuration options: [Disabled] [Auto]

Global C-state Control [Auto]

Allows you to control IO based C-state generation and DF C-states. Configuration options: [Disabled] [Enabled] [Auto]

Power Supply Idle Control [Auto]

Configuration options: [Low Current Idle] [Typical Current Idle] [Auto]

SEV-ES ASID Space Limit [1]

SEV-ES and SNP guests musty use ASIDs in the range 1 through (this value -1). SEV guests must use ASIDs in the range of this value through 1006. To have all ASIDs support SEV-ES or SNP guests, set this value to 1007. The default is 1: all SEV guests and no SEV-ES or SNP guests. Configuration options: [1] - [1007]

SEV Control [Enabled]

Can be used to disable SEV. To re-enable SEV, a power cycle is needed after selecting the **[Enabled]** option. Configuration options: [Disabled] [Enabled]

Streaming Stores Control [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Local APIC Mode [Auto]

Configuration options: [Compatibility] [xAPIC] [x2APIC] [Auto]

ACPI _CST C1 Declaration [Auto]

Determines whether or not to declare the C1 state to the OS. Configuration options: [Disabled] [Enabled] [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Log Transparent Errors [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

AVX512 [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

MONITOR and MWAIT Disable [Auto]

When this option is enabled, MONITOR, MWAIT, MONITORX, and MWAITX opcodes become invalid.

Configuration options: [Disabled] [Enabled] [Auto]

Small Hammer Configuration [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Corrector Branch Predictor [Disabled]

Enabling for branch heavy codes may reduce conditional branch mispredicts. Configuration options: [Disabled] [Enabled]

PAUSE Delay [Auto]

Number of cycles thread will be idle after a PAUSE instruction. Configuration options: [Auto] [Disabled] [16 cycles] [32 cycles] [64 cycles] [128 cycles]

CPU Speculative Store Modes [Auto]

[Balanced]	Store instructions may delay sending out their invalidations to remote cacheline copies when the cacheline is present but not in a writable state in the local cache.
[More Speculative]	Store instructions will send out invalidations to remote cacheline copies as soon as possible.
[Less Speculative]	Store instructions may delay sending out their invalidations to remote cacheline copies when the cacheline is not present in the local cache or not in a writable state in the local cache.
[Auto]	Default setting is applied.

DF Common Options

Memory Addressing

Allows you to configure memory addressing options.

ACPI

Allows you to configure ACPI options.

Link

Allows you to configure Link settings.

SDCI

Allows you to configure SDCI settings.

DF Watchdog Timer Interval [Auto]

Allows you to set the Data Fabric watchdog timer interval. Configuration options: [Auto] [41ms] [166ms] [334ms] [669ms] [1.34 seconds] [2.68 seconds] [5.36 seconds]

Disable DF to external IP SyncFloodPropagation [Auto]

Allows you to enable or disable SyncFlood to UMC and downstream slaves. Configuration options: [Sync flood disabled] [Sync flood enabled] [Auto]

Sync Flood Propagation to DF Components [Auto] Configuration options: [Sync flood disabled] [Sync flood enabled] [Auto]

Freeze DF module queues on error [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

CC6 Memory Region Encryption [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

CCD B/W Balance Throttle Level [Auto]

Configuration options: [Auto] [Level 0] [Level 1] [Level 2] [Level 3] [Level 4]

UMC Common Options

DDR Addressing Options

Allows you to configure DDR addressing options.

DDR Controller Configuration

Allows you to configure DDR controller options.

DDR MBIST Options

Allows you to configure DDR MBIST options.

DDR RAS

Allows you to configure DDR RAS options.

DDR Bus Configuration

Allows you to configure DDR Bus options.

DDR Timing Configuration

Allows you to configure DDR Timing options.

DDR Training Options

Allows you to configure DDR Training options.

DDR Security Allows you to configure DDR Security options.

DDR PMIC Configuration Allows you to configure DDR PMIC options.

DDR Miscellaneous

Allows you to configure DDR Miscellaneous options.

NBIO Common Options

IOMMU [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

DMAr Support [Auto]

Allows you to enable or disable DMAr system protection during POST. Configuration options: [Disabled] [Enabled] [Auto]

DMA Protection [Auto]

Allows you to enable or disable DMA remap support in IVRS IVinfo Field. Configuration options: [Auto] [Enabled] [Disabled]

DRTM Virtual Device Support [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

DRTM Memory Reservation [Auto]

Allows you to enable or disable reservation of 128MB memory below Bottom IO for DRTM. This option is required for Secured-Core Server functionality. Configuration options: [Disabled] [Enabled] [Auto]

The following item appears only when Enable AER Cap is set to [Enabled] or [Auto].

ACS Enable [Auto] Configuration options: [Disabled] [Enabled] [Auto]

PCIe ARI Support [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

PCle ARI Enumeration [Auto]

ARI Forwarding enabled for each downstream port. Configuration options: [Disabled] [Enabled] [Auto]

PCle Ten Bit Tag Support [Auto]

Allows you to enable PCIe ten bit tags for supported devices. Support is disabled if this option is set to **[Auto]**. Configuration options: [Disabled] [Enabled] [Auto]

SMU Common Options

Allows you to configure SMU Common options.

NBIO RAS Common Options

Allows you to configure NBIO RAS Common options.

Enable AER Cap [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Early Link Speed [Auto]

Configuration options: [Auto] [Gen1] [Gen2]

Hot Plug Handling Mode [Auto]

Configuration options: [OS First] [Firmware First/EDR if OS supports] [Firmware First but allow OS first] [System Firmware Intermediary] [Auto]

Hot Plug Allow FF in Synchronous [Disabled]

Allows firmware first hot plug handling mode to operate in mode A and mode B synchronous mappings. Configuration options: [Disabled] [Enabled]

Presence Detect Select Mode [Auto]

Configuration options: [OR] [AND] [Auto]

Data Link Feature Cap [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

CV Test [Auto]

Allows you to enable or disable support for PCIECV tool. Hardware defaults are preserved if this option is set to Auto. Configuration options: [Disabled] [Enabled] [Auto]

SEV-SNP Support [Disabled]

Configuration options: [Disabled] [Enabled] [Auto]

Allow Compliance [Auto]

Allows you to enable or disable PCIe RP entering the polling compliance state. Configuration options: [Disabled] [Enabled] [Auto]

SRIS [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Multi Upstream Auto Speed Change [Auto]

Defines the setting of this feature for all PCIe devices. When this option is set to [Auto], the DXIO default setting of 0 for Gen1 and 1 for Gen2/3 is applied. Configuration options: [Disabled] [Enabled] [Auto]

Multi Auto Speed Change on Last Rate [Auto]

Force PCIe link training speed to last advertised for all ports.

[Disabled] Use highest data rate ever advertised.

[Enabled] Use last data rate advertised.

[Auto] Use default settings.

PCIe Link Speed Capability [GEN5]

Configuration options: [Maximum speed] [Gen1] [Gen2] [GEN3] [GEN4] [GEN5] [Auto]

RTM Margining Support [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

EQ Bypass to Highest Rate [Auto]

Controls the ability to advertise Equalization Bypass to Highest Rate Support in TSxs sent prior to LinkUp=1. Configuration options: [Disabled] [Enabled] [Auto]

nBif Common Options

Allows you to configure nBif Common options.

FCH Common Options

I3C/I2C Configuration Options

Allows you to configure I3C/I2C options.

SATA Configuration Options

Allows you to configure SATA options.

USB Configuration Options

Allows you to configure USB options.

Ac Power Loss Options

Allows you to configure AC power loss options.

UART Configuration Options

Allows you to configure UART options.

ESPI Configuration Options

Allows you to configure ESPI options.

FCH RAS Options

Allows you to configure FCH RAS options.

Miscellaneous Options

Allows you to configure miscellaneous FCH options.

NTB Common Options

Socket-0 P0 NTB Enable [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Socket-0 P2 NTB Enable [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Socket-0 G0 NTB Enable [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Socket-0 G2 NTB Enable [Auto]

Configuration options: [Disabled] [Enabled] [Auto]

Soc Miscellaneous Control

ABL Console Out Control [Auto]

[Disabled]	Disable ConsoleOut Function for ABL.
[Enabled]	Enable ConsoleOut Function for ABL.
[Auto]	Keep default behavior.

The following items appear only when ABL Console Out Control is set to [Enabled].

ABL Console Out Serial Port

[eSPI UART]	Enable serial port through eSPI UART.
[SOC UART0]	Enable serial port through SOC UART0.
[SOC UART1]	Enable serial port through SOC UART1.
[Auto]	Keep default behavior.

The following item appears only when ABL Console Out Serial Port is set to [eSPI UART].

ABL Console Out Serial Port IO

Select Legacy Uart (SIO or eSPI) IO base. Configuration options: [0x3F8] [0x2F8] [0x3E8] [0x2E8] [Auto]

ABL Basic Console Out Control

[Disabled] Disable Basic ConsoleOut Function for ABL.

[Enabled] Enable Basic ConsoleOut Function for ABL.

[Auto] Keep default behavior.

ABL PMU message Control

Allows you to control the total number of PMU debug messages. Configuration options: [Detailed debug message] [Coarse debug message] [Stage completion] [Assertion messages] [Firmware completion message only] [Auto]

ABL Memory Population message Control

Non-recommended configurations may be functional but may not be validated by AMD.

[Warning message]	Show warning messages if Memory channel configuration does NOT folow SP5 Memory Population Guidelines.
[Fatal error]	Show warning messages and halt system.

PSP error injection support

Configuration options: [False] [True]

Firmware Anti-rollback (FAR)

Allows you to configure Firmware Anti-rollback (FAR) options.

Workload Tuning

Workload Profile	
[Disabled]	Don't use any workload profiles.
[CPU Intensive]	Tuned for CPU intensive workloads, providing optimal integer and floating point performance.
[Java Throughput]	Tuned for the highest level of throughput with Java workloads.
[Java Latency]	Tuned for the latency sensitive Java workloads, to meet critical SLA's.
[Power Efficiency]	Tuned for optimal power efficiency.
[Memory Throughput Intensive]	Tuned for the highest memory throughput available.
[Storage IO Intensive]	Tuned for the highest storage IO bandwidth.
[NIC Throughput Intensive]	Tuned for maximum TCP/IP and RDMA network throughput.
[NIC Latency Sensitive]	Tuned for network performance where the kernel preforms L3 packet forwarding.
[Accelerator Throughput]	Tuned to maximum peer-to-peer PCle throughput with accelerators such as GPUs.
[VMware vSphere Optimized]	Tuned for general virt+P3+Q4.
[Linux KVM Optimized]	Tuned for general virtualization performance when using Linux KVM.
[Container Optimized]	Optimized for container performance.
[RDBMS Optimized]	Tuned for relational databases.
[Big Data Analytics Optimized]	Tuned for big data analytics.
[IOT Gateway]	Tuned for throughput analytics as observed by IOT gateways.
[HPC Optimized]	Tuned for general HPC performance.
[OpenStack NFV]	Tuned for Openstack based NFV workloads.
[OpenStack for RealTime Kernel]	Tuned for OpenStack with RealTime kernel enabled.
[Auto]	Uses BIOS default workload profile.

Performance Tracing

Configuration options: [Disabled] [Enabled] [Auto]

CXL Common Options

For an AVL of components that support CXL, please contact your sales representative.

CXL Control

Configuration options: [Disabled] [Enabled] [Auto]

CXL SPM

Set CXL memory as Special Purpose Memory. Configuration options: [Disabled] [Enabled] [Auto]

CXL ASPM

Configuration options: [Disabled] [Enabled] [Auto]

CXL vLSM Power Management

Allows you to configure CXL vLSM Power Management options.

CXL Encryption

Configuration options: [Disabled] [Enabled]

Temp Gen5 Advertisement

Configuration options: [Disabled] [Enabled] [Auto]

4.5.4 Onboard LAN Configuration

Advanced	Aptio Setup — AMI	
▶ Onboard I350 LAN Configuration		Onboard I350 LAN Configuration

Onboard I350 LAN Configuration

Intel I350 LAN1-2

LAN Enable [JumperState]

Allows you to enable or disable the Intel LAN. Configuration options: [Disabled] [JumperState]

4.5.5 Serial Port Console Redirection

Advanced	Aptio Setup – AMI	
COM1 Console Redirection ▶ Console Redirection Settings	[Disabled]	Console Redirection Enable or Disable.
COM2(SOL) Console Redirection ▶ Console Redirection Settings	[Disabled]	
Serial Port for Out-of-Band Manageme Windows Emergency Management Service Console Redirection EMS Console Redirection Settings	ent∕ es (EMS) [Disabled]	

COM1/COM2(SOL)

Console Redirection [Disabled]

Allows you to enable or disable the console redirection feature. Configuration options: [Disabled] [Enabled]

The following item appears only when Console Redirection is set to [Enabled].

Console Redirection Settings

These items become configurable only when you enable the **Console Redirection** item. The settings specify how the host computer and the remote computer (which the user is using) will exchange data. Both computers should have the same or compatible settings.

Terminal Type [ANSI]

Allows you to set the terminal type.

[VT100]	ASCII char set.
[VT100PLUS]	Extends VT100 to support color, function keys, etc.
[VT-UTF8]	Uses UTF8 encoding to map Unicode chars onto 1 or more bytes.
[ANSI]	Extended ASCII char set.

Bits per second [115200]

Selects serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds.

Configuration options: [9600] [19200] [38400] [57600] [115200]

Data Bits [8]

Configuration options: [7] [8]

Parity [None]

A parity bit can be sent with the data bits to detect some transmission errors. [Mark] and [Space] parity do not allow for error detection.

[None]	None
[Even]	parity bit is 0 if the num of 1's in the data bits is even
[Odd]	parity bit is 0 if num of 1's in the data bits is odd
[Mark]	parity bit is always 1
[Space]	parity bit is always 0

Stop Bits [1]

Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning.) The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.

Configuration options: [1] [2]

Flow Control [None]

Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a "stop" signal can be sent to stop the data flow. Once the buffers are empty, a "start" signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals. Configuration options: [None] [Hardware RTS/CTS]

VT -UTF8 Combo Key Support [Enabled]

This allows you to enable the VT -UTF8 Combination Key Support for ANSI/VT100 terminals. Configuration options: [Disabled] [Enabled]

Recorder Mode [Disabled]

With this mode enabled only text will be sent. This is to capture Terminal data. Configuration options: [Disabled] [Enabled]

Resolution 100x31 [Enabled]

This allows you enable or disable extended terminal resolution. Configuration options: [Disabled] [Enabled]

Putty Keypad [VT100]

This allows you to select the FunctionKey and Keypad on Putty. Configuration options: [VT100] [LINUX] [XTERMR6] [SC0] [ESCN] [VT400]

Serial Port for Out-of-Band Management/ Windows Emergency Management Services (EMS)

Console Redirection [Disabled]

Allows you to enable or disable the console redirection feature. Configuration options: [Disabled] [Enabled]

The following item appears only when Console Redirection is set to [Enabled].

Out-of-Band Mgmt Port [COM1]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port. Configuration options: [COM1] [COM2]

Terminal Type [VT-UTF8]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port. Configuration options: [VT100] [VT100PLUS] [VT-UTF8] [ANSI]

Bits per second [115200]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port. Configuration options: [9600] [19200] [57600] [115200]

Flow Control [None]

Microsoft Windows Emergency Management Services (EMS) allow for remote management of a Windows Server OS through a serial port. Configuration options: [None] [Hardware RTS/CTS] [Software Xon/Xoff]

4.5.6 CPU Configuration

This page displays the CPU node information.

Advanced	Aptio Setup - AMI	
CPU Configuration		Enable/disable CPU Virtualization
SVM Mode ▶ Node 0 Information		

SVM Mode [Enabled]

This item allows you enable or disable CPU Virtualization. Configuration options: [Disabled] [Enabled]

Node 0 Information

This item allows you to view memory information related to Node 0.

4.5.7 PCI Subsystem Settings

Allows you to configure PCI, PCI-X, and PCI Express Settings.

Advanced	Aptio Setup – AMI	
PCI Bus Driver Version	A5.01.28	Value to be programmed into
PCI Devices Common Settings:		
PCI Latency Timer	[32 PCI Bus Clocks]	
PCI-X Latency Timer	[64 PCI Bus Clocks]	
VGA Palette Snoop	[Disabled]	
PERR# Generation	[Disabled]	
SERR# Generation	[Disabled]	
Above 4G Decoding	[Enabled]	
Re-Size BAR Support	[Disabled]	
SR-IOV Support	[Enabled]	
BME DMA Mitigation	[Disabled]	
PCI Express Settings		++: Select Screen
		↓↓: Select Item
PCI Express GEN 2 Settings		Enter: Select
		+/-: Change Opt.
PCI Hot-Plug Settings		F1: General Help
		E2: Province Values

PCI Latency Timer [32 PCI Bus Clocks]

Configuration options: [32 PCI Bus Clocks] [64 PCI Bus Clocks] [96 PCI Bus Clocks] [128 PCI Bus Clocks] [160 PCI Bus Clocks] [192 PCI Bus Clocks] [224 PCI Bus Clocks] [248 PCI Bus Clocks] [248 PCI Bus Clocks]

PCI-X Latency Timer [64 PCI Bus Clocks]

Configuration options: [32 PCI Bus Clocks] [64 PCI Bus Clocks] [96 PCI Bus Clocks] [128 PCI Bus Clocks] [160 PCI Bus Clocks] [192 PCI Bus Clocks] [224 PCI Bus Clocks] [248 PCI Bus Clocks] [248 PCI Bus Clocks]

VGA Palette Snoop [Disabled]

Configuration options: [Disabled] [Enabled]

PERR# Generation [Disabled]

Configuration options: [Disabled] [Enabled]

SERR# Generation [Disabled]

Configuration options: [Disabled] [Enabled]

Above 4G Decoding [Enabled]

Allows you to enable or disable 64-bit capable devices to be decoded in above 4G address space. It only works if the system supports 64-bit PCI decoding. Configuration options: [Disabled] [Enabled]

Re-Size BAR Support [Disabled]

Configuration options: [Disabled] [Auto]

This option only comes into effect if the system has Resizable BAR capable PCIe devices.

SR-IOV Support [Enabled]

This option enables or disables Single Root IO Virtualization Support if the system has SR-IOV capable PCIe devices. Configuration options: [Disabled] [Enabled]

BME DMA Mitigation [Disabled]

This allows you to enable or disable re-enabling Bus Master Attribute disabled during Pci enumeration for PCI Bridges after SMM locked. Configuration options: [Disabled] [Enabled]

PCI Express Settings

PCI Express Device Register Settings

Relaxed Ordering [Enabled]

Configuration options: [Disabled] [Enabled]

Extended Tag [Disabled]

If this item is enabled, it will allow Device to use 8-bit Tag field as a requester. Configuration options: [Disabled] [Enabled]

No Snoop [Enabled]

Configuration options: [Disabled] [Enabled]

Maximum Payload [Auto]

Allows you to set Maximum Payload of PCI Express Device or allow System BIOS to select the value. Configuration options: [Auto] [128 Bytes] [256 Bytes] [512 Bytes] [1024 Bytes] [2048

Configuration options: [Auto] [128 Bytes] [256 Bytes] [512 Bytes] [1024 Bytes] [20 Bytes] [4096 Bytes]

Maximum Read Request [Auto]

Allows you to set Maximum Read Request Size of PCI Express Device or allow System BIOS to select the value. Configuration options: [Auto] [128 Bytes] [256 Bytes] [512 Bytes] [1024 Bytes] [2048 Bytes] [4096 Bytes]

PCI Express Link Register Settings

ASPM Support [Disabled]

Allows you to set the ASPM level.

[Disabled]	Disables ASPM.
------------	----------------

[Auto] BIOS auto configure.

[Force L0s] Force all links to L0 State.

Enabling ASPM may cause some PCI-E devices to fail.

Extended Synch [Disabled]

If this item is enabled, it will allow generation of Extended Synchronization patterns. Configuration options: [Disabled] [Enabled]

Link Training Retry [5]

Allows you to define the number of Retry Attempts software will take to retrain the link if previous training attempt was unsuccessful. Configuration options: [Disabled] [2] [3] [5]

Link Training Timeout (uS) [1000]

Allows you to define the number of Microseconds software will wait before polling 'link Training' bit in Link Status register. Configuration options: [10] - [10000]

Unpopulated Links [Keep Link ON]

If this option is set to **[Disable]**, in order to save power, software will disable unpopulated PCI Express Links. Configuration options: [Keep Link ON] [Disable]

PCI Express GEN 2 Settings

The items in this submenu allow you change PCI Express GEN Devices Settings.

PCI Express GEN2 Device Register Settings

Completion Timeout [Default]

In device Functions that support Completion Timeout programmability, allows system software to modify the Completion Timeout value.

- [Default] 50us to 50ms.
- [Shorter] Software will use shorter timeout ranges supported by hardware.
- [Longer] Software will use longer timeout ranges.
- [Disabled] Disable completion timeout.

ARI Forwarding [Disabled]

If supported by hardware and set to **[Enabled]**, the Downstream Port disables its traditional Device Number field being 0 enforcement when turning a Type1 Configuration Request into a Type0 Configuration Request, permitting access to Extended Functions in an ARI Device immediately below the Port. Configuration options: [Disabled] [Enabled]

Atomic0p Requester Enable [Disabled]

If supported by hardware and set to **[Enabled]**, this function initiates Atomic0p Requests only if Bus Master Enable bit is in the Command Register Set. Configuration options: [Disabled] [Enabled]

Atomic0p Egress Blocking [Disabled]

If supported by hardware and set to **[Enabled]**, outbound Atomic0p Requests via Egress Ports will be blocked. Configuration options: [Disabled] [Enabled]

IDO Request Enable [Disabled]

If supported by hardware and set to **[Enabled]**, this permits setting the number of ID-Based Ordering (IDO) bit (Attribute[2]) requests to be initiated. Configuration options: [Disabled] [Enabled]

IDO Completion Enable [Disabled]

If supported by hardware and set to **[Enabled]**, this permits setting the number of ID-Based Ordering (IDO) bit (Attribute[2]) requests to be initiated. Configuration options: [Disabled] [Enabled]

LTR Mechanism Enable [Disabled]

If supported by hardware and set to **[Enabled]**, this enables the Latency Tolerance Reporting (LTR) Mechanism. Configuration options: [Disabled] [Enabled]

End-End TLP Prefix Blocking [Disabled]

If supported by hardware and set to **[Enabled]**, this function will block forwarding of TLPs containing End-End TLP Prefixes. Configuration options: [Disabled] [Enabled]

PCI Express GEN2 Link Register Settings

Target Link Speed [Auto]

If supported by hardware and set to **[Force to X.X GT/s]**, for Downstream Ports, this sets an upper limit on Link operational speed by restricting the values advertised by the Upstream component in its training sequences. When **[Auto]** is selected HW initialized data will be used.

Configuration options: [Disabled] [Force to 2.5 GT/s] [Force to 5.0 GT/s] [Force to 8.0 GT/s] [Force to 16.0 GT/s] [Force to 32.0 GT/s]

Clock Power Management [Disabled]

If supported by hardware and set to **[Enabled]**, the device is permitted to use CLKREQ# signal for power management of Link clock in accordance to protocol defined in appropriate form factor specification. Configuration options: [Disabled] [Enabled]

Compliance SOS [Disabled]

If supported by hardware and set to **[Enabled]**, this will force LTSSM to send SKP Ordered Sets between sequences when sending Compliance Pattern or Modified Compliance Pattern.

Configuration options: [Disabled] [Enabled]

Hardware Autonomous Width [Enabled]

If supported by hardware and set to **[Disabled]**, this will disable the hardware's ability to change link width except width size reduction for the purpose of correcting unstable link operation.

Configuration options: [Disabled] [Enabled]

Hardware Autonomous Speed [Enabled]

If supported by hardware and set to **[Disabled]**, this will disable the hardware's ability to change link speed except speed rate reduction for the purpose of correcting unstable link operation.

Configuration options: [Disabled] [Enabled]

PCI Hot-Plug Settings

The items in this submenu allow you change PCI Express Hot-Plug and Standard HP Controller Settings.

BIOS Hot-Plug Support [Enabled]

If this item is enabled, it allows the BIOS built-in Hot-Plug support to be used.. Use this feature if OS does not support PCI Express and SHPC hot-plug natively. Configuration options: [Disabled] [Enabled]

The following items appear only when BIOS Hot-Plug Support is set to [Enabled].

PCI Buses Padding [1]

Configuration options: [Disabled] [1] - [5]

I/O Resources Padding [Disabled] Configuration options: [Disabled] [4 K] [8 K] [16 K] [32 K]

MMIO 32 bit Resources Padding [Disabled]

Configuration options: [Disabled] [1 M] [2 M] [4 M] [8 M] [16 M] [32 M] [64 M] [128 M]

PFMMIO 32 bit Resources Padding [Disabled]

Configuration options: [Disabled] [1 $\bar{\rm M}$] [2 M] [4 $\bar{\rm M}$] [8 M] [16 M] [32 M] [64 M] [128 M]

PFMMIO 64 bit Resources Padding [64 M]

Configuration options: [Disabled] [1 \overline{M}] [2 M] [4 M] [8 M] [16 M] [32 M] [64 M] [128 M] [256 M] [512 M] [1 G] [2 G] [4 G] [8 G]

Due to the Bridge Architecture Specification Software, selected padding for 64 and 32 bit PFMMIO window cannot be applied at the same time. User must pick choose which PFMMIO they want to pad by setting the other resource to the disabled state. If both PFMMIO is set, the 32 bit resource will be used.

4.5.8 USB Configuration

Advanced	Aptio Setup — AMI	
USB Configuration		[Enabled]: Enables the Legacy USB support.
USB Module Version	29	[Auto]: Automatically disables the Legacy USB support if USB
USB Controllers:		devices are not connected.
2 XHCIS		[Disabled]: USB devices are
USB Devices:		available only for EFI
3 Drives, 3 Keyboards, 2 Mice,	3 Hubs	applications.
Legacy USB Support	[Enabled]	
XHCI Hand-off	[Enabled]	
USB Mass Storage Driver Support	[Enabled]	
USB Keyboard and Mouse Simulator	[Enabled]	
		++: Select Screen
USB hardware delays and time-outs:		†∔: Select Item
USB transfer time-out	[20 sec]	Enter: Select
Device reset time-out	[20 sec]	+/−: Change Opt.
Device power-up delay	[Auto]	F1: General Help
		F2: Previous Values
Mass Storage Devices:		F5: Optimized Defaults
AMI Virtual CDROMO 1.00	[Auto]	F10: Save Changes & Reset
AMI Virtual HDiskO 1.00	[Auto]	F12: Print Screen
JetFlashTranscend 4GB 8.07	[Auto]	ESC: Exit
4		4

Legacy USB Support [Enabled]

 [Disabled]
 USB devices are available only for EFI applications.

 [Enabled]
 Enables the support for USB devices on legacy operating systems (OS).

 [Auto]
 Automatically disables the Legacy USB support if USB devices are not connected.

XHCI Hand-off [Enabled]

Allows you to enable or disable workaround for OSes without XHCI hand-off support. The XHCI ownership change should be claimed by XHCI driver. Configuration options: [Enabled] [Disabled]

USB Mass Storage Driver Support [Enabled]

Configuration options: [Disabled] [Enabled]

USB Keyboard and Mouse Simulator [Enabled]

Enable this item to simulate USB keyboard and mouse to PS/2 module in Windows 7. Ensure to install the USB drivers to your system before disabling this item. Configuration options: [Disabled] [Enabled]

USB hardware delays and time-outs

USB transfer time-out [20 sec]

Allows you to select time-out value for Control, Bulk, and Interrupt transfers. Configuration options: [1 sec] [5 sec] [10 sec] [20 sec]

Device reset time-out [20 sec]

Configuration options: [10 sec] [20 sec] [30 sec] [40 sec]

Device power-up delay [Auto]

Maximum time the device will take before it properly reports itself to the Host Controller.

[Auto] Uses default value; for a Root port it is 100 ms, for a Hub port the delay is taken from Hub descriptor.

[Manual]

Manually set the device power-up delay.

The following item appears only when Device power-up delay is set to [Manual].

Device power-up delay in seconds [5]

Allows you to set the device power-up delay in seconds. Use the <+> or <-> to adjust the value. The values range from 1 to 40.

Mass Storage Devices

Allows you to select the mass storage device emulation type for devices connected. Configuration options: [Auto] [Floppy] [Forced FDD] [Hard Disk] [CD-ROM]

4.5.9 Network Stack Configuration

Network stack [Enabled]

Enables or disables the network stack feature. Configuration options: [Disabled] [Enabled]

The following item appears only when Network stack is set to [Enabled].

Ipv4 PXE Support [Disabled]

Enables or disables the Ipv4 PXE Boot Support. If disabled, Ipv4 PXE boot option will not be created.

Configuration options: [Disabled] [Enabled]

Ipv4 HTTP Support [Disabled]

Enables or disables the Ipv4 HTTP Boot Support. If disabled, Ipv4 HTTP boot option will not be created. Configuration options: [Disabled] [Enabled]

Ipv6 PXE Support [Disabled]

Enables or disables the Ipv6 PXE Boot Support. If disabled, Ipv6 PXE boot option will not be created.

Configuration options: [Disabled] [Enabled]

Ipv6 HTTP Support [Disabled]

Enables or disables the Ipv6 HTTP Boot Support. If disabled, Ipv6 HTTP boot option will not be created. Configuration options: [Disabled] [Enabled]

PXE boot wait time [0]

Set the wait time to press ESC key to abort the PXE boot. Use the <+> or <-> to adjust the value. The values range from 0 to 5.

Media detect count [1]

Set the number of times presence of media will be checked. Use the <+> or <-> to adjust the value. The values range from 1 to 50.

4.5.10 NVMe Configuration

This page will display the NVMe controller and drive information. You may press <Enter> on a connected NVMe device which appears in this menu to view more information on the NVMe device.

Advanced	Aptio Setup — AMI	
NVMe Configuration		
No NVME Device Found		

Device

The devices and names shown in the NVMe configuration list depends on the connected devices. If no devices are connected, **No NVMe Device Found** will be displayed.

Self Test Option [Short]

This option allows you to select either Short or Extended Self Test. Short option will take couple of minutes, and the extended option will take several minutes to complete. Configuration options: [Short] [Extended]

Self Test Action [Controller Only Test]

This item allows you to select either to test Controller alone or Controller and NameSpace. Selecting Controller and Namespace option will take a lot longer to complete the test.

Configuration options: [Controller Only Test] [Controller and NameSpace Test]

Run Device Self Test

Press <Enter> to perform device self test for the corresponding Option and Action selected by the user. Pressing the <ESC> key will abort the test. The results shown below is the most recent result logged in the device.

4.5.11 SATA Configuration

This page will display the SATA controller and drive information.

4.5.12 Offboard SATA Controller Configuration

Allows you to configure the Offboard SATA Controller.

Aptio Setup - AMI Advanced		
 SATA Controller 0 Configur 0 	ation Settings – Bus C5 Dev 0 Fun	SATA Controller 0 Configuration Settings - Bus

4.5.13 APM Configuration

Allows you to configure the Advance Power Management (APM) settings.

Advanced	Aptio Setup – AMI	
Restore AC Power Loss	[Last State]	Select AC power state when
Power On By PCI-E	[Disabled]	power is re-applied after a
Power On By RTC	[Disabled]	power failure.

Restore AC Power Loss [Last State]

When set to [Power Off], the system goes into off state after an AC power loss. When set to [Power On], the system will reboot after an AC power loss. When set to [Last State], the system goes into either off or on state, whatever the system state was before the AC power loss.

Configuration options: [Power On] [Power Off] [Last State]

Power On By PCI-E [Disabled]

[Disabled]	Disables	the PCIE	devices to	generate a	wake event.

[Enabled] Enables the PCIE devices to generate a wake event.

Power On By RTC [Disabled]

[Disabled] Disables RTC to generate a wake event.

[Enabled] When set to [Enabled], the items **RTC Alarm Date (Days)** and **Hour/Minute/Second** will become user-configurable with set values.

4.5.14 AMD Mem Configuration Status

The items in this menu display the memory configuration (initialized by ABL) status.

Aptio Setup - AMI				
Advanced Advanced				
▶ Socket 0		Socket-specific memory		
Mbist Test Enable	Disabled, 0xC000	configuration status		
Mbist Aggressor Enable	Disabled, 0xC000

Odts Cmd Throt Cycle	Disabled, 0xC004	F10: Save Changes & Reset		
		F12: Print Screen		
		ESC: Exit		

Socket 0

Allows you to view and configure Socket-specific memory configuration status options.

4.5.15 T1s Auth

Allows you to configure the Server Certificate Authority (CA).

Aptio Setup – AMI Advanced	
▶ Server CA Configuration	Press <enter> to configure Server CA.</enter>
▶ Client Cert Configuration	

Server CA Configuration / Client Cert Configuration

Enroll Cert

Allows you to enroll a certificate using a certificate file or manually input a certificate GUID.

Enroll Cert Using File

Allows you to enroll a certificate using a certificate file. You will be prompted to select a storage device and navigate to the location of the certificate file.

Cert GUID

Allows you to enroll a certificate by manually inputting the certificate GUID.

Commit Changes and Exit

Exit Server CA configuration after saving the changes.

Discard Changes and Exit

Exit Server CA configuration without saving any changes.

Delete Cert

Allows you to delete the certificate.

4.5.16 Driver Health

Provides Health Status for the Drivers/Controllers.

4.5.17 Third-party UEFI driver configurations

Additional configuration options for third-party UEFI drivers installed to the system will appear in the bottom of the Advanced menu, in the section marked red in the screenshot below.

	Aptio Setup - AMI

Administrator Password

To set an administrator password:

- 1. Select the Administrator Password item and press < Enter>.
- 2. From the Create New Password box, key in a password, then press <Enter>.
- 3. Confirm the password when prompted.

To change an administrator password:

- 1. Select the Administrator Password item and press <Enter>.
- 2. From the Enter Current Password box, key in the current password, then press <Enter>.
- 3. From the Create New Password box, key in a new password, then press <Enter>.
- 4. Confirm the password when prompted.

To clear the administrator password, follow the same steps as in changing an administrator password, but press <Enter> when prompted to create/confirm the password.

User Password

To set a user password:

- 1. Select the User Password item and press <Enter>.
- 2. From the Create New Password box, key in a password, then press <Enter>.
- 3. Confirm the password when prompted.

To change a user password:

- 1. Select the User Password item and press <Enter>.
- 2. From the Enter Current Password box, key in the current password, then press <Enter>.
- 3. From the Create New Password box, key in a new password, then press <Enter>.
- 4. Confirm the password when prompted.

To clear a user password:

- 1. Select the Clear User Password item and press < Enter>.
- 2. Select Yes from the Warning message window then press <Enter>.

Secure Boot

This item allows you to customize the Secure Boot settings.

	Security	Aptio Setup – AMI	
ſ	Secure Boot state	User	Secure Boot feature is Active
		[Disabled] Not Active	Platform Key(PK) is enrolled and the System is in User mode.
	Secure Boot Mode ▶ Install Default Secure Boot Keys ▶ Clear Secure Boot Keys	[Custom]	ine mode change requires platform reset

Secure Boot [Disabled]

Secure Boot feature is Active if Secure Boot is Enabled, Platform Key (PK) is enrolled, and the System is in User mode. A mode change requires a platform reset. Configuration options: [Disabled] [Enabled]

Secure Boot Mode [Custom]

Allows you to set the Secure Boot selector. In Custom mode, Secure Boot Policy variables can be configured physically by the present user without full authentication. Configuration options: [Custom] [Standard]

The following items are only available when Secure Boot Mode is set to [Custom].

Install Default Secure Boot Keys

This option will load the default secure boot keys, including the PK (Platform key), KEK (key-exchange key), db (signature database), and dbx (revoked signature database). All the secure boot keys states will change from unloaded to loaded. Save changes and reset the system for the changes to take effect.

Clear Secure Boot Keys

This option will delete all previously applied secure boot keys, including the PK (Platform key), KEK (key-exchange key), db (signature database), and dbx (revoked signature database). All the secure boot keys states will change from unloaded to loaded. Save changes and reset the system for the changes to take effect.

Key Management

The Key Management item allows you to modify Secure Boot variables and set Key Management page.

	Aptio Setup – AMI Security	
Γ	Vendor Keys Valid	Install factory default Secure
	Factory Key Provision [Enabled] Install Default Secure Boot Keys Clear Secure Boot Keys Enroll Efi Image Save all Secure Boot variables	BOOT Keys after the platform reset and while the System is in Setup mode
	Secure Boot variable Size Keys Key Source PK Management 886 1 Default KEK Management 3573 3 Default DB Management 6322 10 Default DBX Management 3724 77 Default Authorized TimeStamps(dbt) 0 0 No Keys DsRecovery Signatures(dbr) 0 0 No Keys	++: Select Screen 14: Select Item Enter: Select

Factory Key Provision [Enabled]

Allows you to provision factory default Secure Boot keys after the platform resets and while the system is in Setup Mode. Configuration options: [Disabled] [Enabled]

Install Default Secure Boot Keys

This option will load the default secure boot keys, including the PK (Platform key), KEK (key-exchange key), db (signature database), and dbx (revoked signature database). All the secure boot keys states will change from unloaded to loaded. Save changes and reset the system for the changes to take effect.

Clear Secure Boot Keys

This option will delete all previously applied secure boot keys, including the PK (Platform key), KEK (key-exchange key), db (signature database), and dbx (revoked signature database). All the secure boot keys states will change from unloaded to loaded. Save changes and reset the system for the changes to take effect.

Enroll Efi Image

This item will allow the image to run in Secure Boot mode. Enroll SHA256 Hash certificate of a PE image into Authorized Signature Database (db).

Save all Secure Boot Variables

This option will save NVRAM content of Secure Boot policy variables to the file (EFI_ SIGNATURE_LIST data format) in root foler on a target file system device.

PK Management

Configuration options: [Details] [Save To File] [Set New Key] [Delete key]

KEK Management / DB Management / DBX Management

Configuration options: [Details] [Save To File] [Set New Key] [Append Key] [Delete key]

Authorized TimeStamps (dbt) / OsRecovery Signatures (dbr)

Configuration options: [Set New Key] [Append Key]

4.8 Boot menu

The Boot menu items allow you to change the system boot options.

Main Advanced Chipset	Aptio Setup – AMI Security <mark>Boot Tool Event Logs Ser</mark>	ver Mgmt Exit
Boot Configuration Setup Prompt Timeout Bootup NumLock State Boot Logo Display	<mark>5</mark> [On] [Disabled]	Number of seconds to wait for setup activation key. 65535(0xFFF) means indefinite waiting.

	Version 2.22.1285 Copyright (C) 2022	

Setup Prompt Timeout [5]

Allows you to set the number of seconds that the firmware waits before initiating the original default boot selection. 65535(OxFFFF) means indefinite waiting. Use the <+> or <-> to adjust the value.

Bootup NumLock State [On]

Configuration options: [Off] [On]

Boot Logo Display [Disabled]

[Disabled]Hide the logo during POST.[Enabled]Display the boot logo during POST.

Boot Option Priorities

These items specify the boot device priority sequence from the available devices. The number of device items that appears on the screen depends on the number of devices installed in the system.

- To select the boot device during system startup, press <F8> when ASUS Logo appears.
- To access Windows OS in Safe Mode, please press <F8> after POST.

4.9 Tool menu

The Tool menu items allow you to configure options for special functions. Select an item then press <Enter> to display the submenu.

Main Advanced Chipset	Security (Aptio Setup – AMI Boot <mark>Tool </mark> Event Logs	Server Mgmt Exit
Start ASUS EzFlash IPMI Hardware Monitor ASUS SMBIOS Viewer ASUS Storage Viewer			Press ENTER to run the utility to select and update BIOS.

OS Watchdog Timer [Disabled]

Allows you to start a BIOS timer which can only be shut off by Management Software after the OS loads. Helps determine if the OS successfully loaded or follows the OS Boot Watchdog Timer policy.

Configuration options: [Disabled] [Enabled]

The following items appear only when the OS Watchdog Timer is set to [Enabled].

OS Wtd Timer Timeout [10]

Allows you to enter a value between 1 to 30 minutes for OS Boot Watchdog Timer Expiration.

Configuration options: [1] - [30]

OS Wtd Timer Policy [Reset]

This item allows you to configure the how the system should respond if the OS Boot Watch Timer expires.

Configuration options: [Do Nothing] [Reset] [Power Down]
4.11.1 System Event Log

Allows you to change the SEL event log configuration.

Erase SEL [No]

Allows you to choose options for erasing SEL. Configuration options: [No] [Yes, On next reset] [Yes, On every reset]

4.11.2 BMC network configuration

The sub-items in this configuration allow you to configure the BMC network parameters.

Aptio Setup - AMI

Configure IPV4 support

DM_LAN/Shared LAN

Configuration Address source [Previous State]

This item allows you to configure LAN channel parameters statistically or dynamically (by BIOS or BMC). **[Previous State]** option will not modify any BMC network parameters during BIOS phase.

Configuration options: [Previous State] [Static] [DynamicBmcDhcp] [DynamicBmcNonDhcp]

The following items are available only when **Configuration Address source** is set to **[Static]**.

Station IP address

Allows you to set the station IP address.

Subnet mask

Allows you to set the subnet mask. We recommend that you use the same Subnet Mask you have specified on the operating system network for the used network card.

Router IP Address

Allows you to set the router IP address.

Router MAC Address

Allows you to set the router MAC address.

Configure IPV6 support

DM_LAN/Shared LAN

IPV6 support [Enabled]

Allows you to enable or disable IPV6 support. Configuration options: [Enabled] [Disabled]

The following items appear only when IPV6 support is set to [Enabled].

Configuration Address source [Previous State]

Allows you to set the LAN channel parameters statically or dynamically (by BIOS or by BMC). [Previous State] option will not modify any BMC network parameters during BIOS phase.

Configuration options: [Previous State] [Static] [DynamicBmcDhcp]

The following items are available only when **Configuration Address source** is set to **[Static]**.

Station IPV6 address

Allows you to set the station IPV6 address.

Prefix Length

Allows you to set the prefix length (maximum of Prefix Length is 128).

Configuration Router Lan1-2 Address source [Previous State]

Allows you to set the LAN channel parameters statically or dynamically (by BIOS or by BMC). [Previous State] option will not modify any BMC network parameters during BIOS phase.

Configuration options: [Previous State] [Static] [DynamicBmcDhcp]

The following items are available only when **Configuration Router Lan1-2 Address source** is set to **[Static]**.

IPV6 Router1 IP address

Allows you to set the IPV6 Router1 IP address.

IPV6 Router1 Prefix Length Lan1-2

Allows you to set the IPV6 Router1 prefix length (maximum of Prefix Length is 128).

IPV6 Router1 Prefix Value Lan1-2

Allows you to set the IPV6 Router1 prefix value.

Configure VLAN support

DM_LAN/Shared LAN

VLAN support [Previous State]

Allows you to enable or disable IPV6 support. Configuration options: [Enabled] [Disabled] [Previous State]

The following items appear only when VLAN support is set to [Enabled].

VLAN ID [0]

VLAN ID Range is from 1-4094. VLAN ID 0 and 4095 are reserved VLAN ID's. Configuration options: [1] - [4094]

VLAN Priority [0]

Value ranges from 0 to 7. 7 is the highest priority for VLAN. Configuration options: [0] - [7]

4.11.3 View System Event Log

This item allows you to view the system event log records.

Save Options

Discard Changes and Exit

Exit system setup without saving any changes.

Save Changes and Reset

Reset system after saving the changes.

Discard Changes and Reset

Reset system setup without saving any changes.

Save Changes

Save changes done so far to any of the setup options.

Discard Changes

Discard changes done so far to any of the setup options.

Default Options

Load Optimized Defaults

Restore/Load Default values for all the setup options.

Boot Override

These items displays the available devices. The device items that appears on the screen depends on the number of devices installed in the system. Click an item to start booting from the selected device.

Launch EFI Shell from USB drives

Attempt to Launch EFI Shell application (Shell.efi) from one of the available filesystem devices.

5

Driver Installation

This chapter provides instructions for installing the necessary drivers for different system components.

5.1 Running the Support DVD

The support DVD that is bundled with your motherboard contains drivers, management applications, and utilities that you can install to maximize the features of your motherboard.

- The contents of the support DVD are subject to change at any time without notice. Visit the ASUS website (<u>www.asus.com</u>) for the latest updates on software and utilities.
 - The support DVD is supported on Windows[®] Server 2016 and Windows[®] Server 2019.

The main screen of the Support DVD contains the following tabs:

- 1. Drivers Shows the available device drivers that the system detects.
- 2. Utilities Displays the software applications and utilities that the motherboard supports.
- 3. Manual Provides the link to the user guide(s).

You need an internet browser installed in your OS to view the User Guide.

 Contact - Displays the ASUS contact information, e-mail addresses, and useful links if you need more information or technical support for your motherboard.

Appendix

This appendix includes additional information that you may refer to when configuring the motherboard.

K14PA-U24 block diagram

Notices

Federal Communications Commission Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The use of shielded cables for connection of the monitor to the graphics card is required to assure compliance with FCC regulations. Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Compliance Statement of Innovation, Science and Economic Development Canada (ISED)

This device complies with Innovation, Science and Economic Development Canada licence exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

CAN ICES-003(A)/NMB-003(A)

Déclaration de conformité de Innovation, Sciences et Développement économique Canada (ISED)

Le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

CAN ICES-003(A)/NMB-003(A)

Japan JATE

本製品は電気通信事業者(移動通信会社、固定通信会社、インターネットプロバイダ等)の通信 回線(公衆無線LANを含む)に直接接続することができません。本製品をインターネットに接続す る場合は、必ずルータ等を経由し接続してください。

Japan statement notice

This product cannot be directly connected to the Internet (including public wireless LAN) of a telecom carrier (mobile network companies, landline network companies, Internet providers, etc.). When connecting this product to the Internet, be sure to connect it through a router or switch.

Australia statement notice

From 1 January 2012 updated warranties apply to all ASUS products, consistent with the Australian Consumer Law. For the latest product warranty details please visit <u>https://www.asus.com/support/</u>. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

If you require assistance please call ASUS Customer Service 1300 2787 88 or visit us at https://www.asus.com/support/.

DO NOT throw the motherboard in municipal waste. This product has been designed to enable proper reuse of parts and recycling. This symbol of the crossed out wheeled bin indicates that the product (electrical and electronic equipment) should not be placed in municipal waste. Check local regulations for disposal of electronic products.

DO NOT throw the mercury-containing button cell battery in municipal waste. This symbol of the crossed out wheeled bin indicates that the battery should not be placed in municipal waste.

Declaration of compliance for product environmental regulation

ASUS follows the green design concept to design and manufacture our products, and makes sure that each stage of the product life cycle of ASUS product is in line with global environmental regulations. In addition, ASUS disclose the relevant information based on regulation requirements.

Please refer to <u>http://csr.asus.com/Compliance.htm</u> for information disclosure based on regulation requirements ASUS is complied with:

EU REACH and Article 33

Complying with the REACH (Registration, Evaluation, Authorization, and Restriction of Chemicals) regulatory framework, we publish the chemical substances in our products at ASUS REACH website at http://csr.asus.com/english/REACH.htm.

EU RoHS

This product complies with the EU RoHS Directive. For more details, see http://csr.asus.com/english/article.aspx?id=35

Japan JIS-C-0950 Material Declarations

Information on Japan RoHS (JIS-C-0950) chemical disclosures is available on http://csr.asus.com/english/article.aspx?id=19

India RoHS

This product complies with the "India E-Waste (Management) Rules, 2016" and prohibits use of lead, mercury, hexavalent chromium, polybrominated biphenyls (PBBs) and polybrominated diphenyl ethers (PBDEs) in concentrations exceeding 0.1% by weight in homogenous materials and 0.01% by weight in homogenous materials for cadmium, except for the exemptions listed in Schedule II of the Rule.

Vietnam RoHS

ASUS products sold in Vietnam, on or after September 23, 2011, meet the requirements of the Vietnam Circular 30/2011/TT-BCT.

Các sản phẩm ASUS bán tại Việt Nam, vào ngày 23 tháng 9 năm2011 trở về sau, đều phải đáp ứng các yêu cầu của Thông tư 30/2011/TT-BCT của Việt Nam.

Türkiye RoHS

AEEE Yönetmeliğine Uygundur

ASUS Recycling/Takeback Services

ASUS recycling and takeback programs come from our commitment to the highest standards for protecting our environment. We believe in providing solutions for you to be able to responsibly recycle our products, batteries, other components as well as the packaging materials. Please go to http://csr.asus.com/english/Takeback.htm for detailed recycling information in different regions.

Ecodesign Directive

European Union announced a framework for the setting of ecodesign requirements for energy-related products (2009/125/EC). Specific Implementing Measures are aimed at improving environmental performance of specific products or across multiple product types. ASUS provides product information on the CSR website. The further information could be found at https://csr.asus.com/english/article.aspx?id=1555.
